Frontiers in Reproductive Health (FRONTIERS) is a global research program conducted by the Population Council. The program’s objective is to improve the delivery of family planning and reproductive health services in developing countries. FRONTIERS focuses on operations research (OR), which uses systemic research techniques to improve service delivery and influence related policies. FRONTIERS is conducting nearly 100 research projects in Africa, Asia, Eastern Europe, and Latin America.

The Population Council, an international, nonprofit, nongovernmental organization established in 1952, seeks to improve the well-being and reproductive health of current and future generations around the world and to help achieve a humane, equitable, and sustainable balance between people and resources.

MEASURE Communication produces global and country-specific materials (in print, video, and electronic formats), provides technical assistance and training to developing country institutions for improved communication of research findings to policymakers and other nontechnical audiences, facilitates media networks, and expands the use of new technologies and new formats for effective communication.

The Population Reference Bureau is the leader in providing timely and objective information on U.S. and international population trends and their implications.

This work has been funded by the U.S. Agency for International Development (USAID) through FRONTIERS and MEASURE Communication, through Cooperative Agreements No. HRN-A-00-98-00012-00 and HRN-A-00-98-00001-00, respectively.
