## ***FOREWORD***

The data contained in this chartbook come from the 2006-2010 American Community Survey. While the types of demographic and housing data included in Chapters 1 through 4 were also collected in the 2010 decennial census, the types of social and economic data included in Chapters 5 through 8 were not. This is because unlike previous censuses—which consisted of a “short form” of basic demographic and housing questions and a “long form” (used for a sample of households) that also asked detailed questions about social, economic, and housing characteristics—the 2010 census only had a short form.

The decennial long form has been replaced by the American Community Survey (ACS), a nationwide study collected continuously every year in every county in the United States. The ACS is designed to provide communities with reliable and timely demographic, social, economic, and housing data each year. However, the annual sample size of the ACS is much smaller than the sample size of the decennial census long form; therefore, data from five years must be combined to provide reliable estimates for geographic areas with fewer than 20,000 people. Since a number of counties in the Appalachian region have fewer than 20,000 residents, we must use the 2006-2010 ACS data to have comparable statistics for all 420 counties in the region. (Although the data in Chapters 1 through 4 were also collected in the 2010 decennial census, we use ACS data in this chartbook to create a comparable time series of data for all the counties in the 13 Appalachian states.)

The five-year ACS estimates for 2006-2010 represent concepts that are fundamentally different from those associated with data from the decennial census. While the main function of the census is to provide *counts* of people for congressional apportionment and legislative redistricting, the primary purpose of the ACS is to measure the changing *characteristics* of the U.S. population. Moreover, while the decennial census provides a “snapshot” of the U.S. population once every 10 years, the ACS has been described as a “moving video image” that is continually updated. Finally, while the census provides “point in time” estimates designed to approximate an area’s characteristics on a specific date, the ACS provides “period” estimates that represent data collected over a period of time. The five-year estimates in this chartbook, therefore, are data collected over the five-year (or 60-month) period from 2006 through 2010. These ACS estimates are *not* averages of monthly or annual values, but rather an *aggregation* of data collected over the five-year period.

For areas with consistent population characteristics throughout the calendar year, ACS period estimates might not differ much from those that would result from a point-in-time survey like the decennial census. However, ACS period estimates might be noticeably different from point-in-time estimates for areas with seasonal populations or those that experience a natural disaster such as a hurricane. For example, a resort community in the upper Midwest might be dominated by locals in the winter months and by temporary workers and tourists in the summer months, with a corresponding decrease in employment rates during the winter and increase in these rates during the summer. In such a community, the ACS period estimate of the percent of persons in the labor force, which is based on data across the entire calendar year, would likely be higher than the decennial census point-in-time estimate from April 1.

While five-year ACS data are needed to provide reliable estimates for areas with small populations, they can make it difficult to track trends in these areas. The 2006-2010 ACS data illustrate this problem. The 2006-2010 time period covers three distinct periods of economic activity: the months of economic growth that preceded the recession of December 2007 to June 2009, the recession period itself, and the beginning of the economic recovery that followed the downturn. Since the 2006-2010 ACS pools data from all three periods, it smooths out the extreme variations in economic measures that would be evident in annual data from the recent severe recession.

Map Title: Population Distribution in the Appalachian Region, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Of the 304 million persons in the United States during the period from 2006-2010, 25 million lived in the Appalachian region. Yet the population of the region’s 420 counties varied greatly. On one hand, two-thirds of the counties had populations of fewer than 50,000 people, and 125 counties had fewer than 20,000 residents. On the other hand, pockets of the Appalachian population lived in large and mid-sized metropolitan areas, including Pittsburgh, Birmingham, and the Atlanta suburbs. Allegheny County, Pa. (where Pittsburgh is located) had 1.2 million residents. It is important to note that the Appalachian population has continued to grow; the 2010 census reported 25.2 million residents in the region (out of 308.7 million Americans nationwide).

**Figure 1.2: Population per Square Mile of Land Area in the Appalachian Region, 2006-2010**

Map Title: Population per Square Mile of Land Area in the Appalachian Region, 2006-2010

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

While Appalachia’s population density was noticeably greater than the United States as a whole over the 2006-2010 period, less than half of the region’s counties had population concentrations at or above the national average. Most of the high-density counties were in metropolitan areas, both large (Pittsburgh, Birmingham, suburban Atlanta) and small (Winston-Salem, N.C.; Knoxville, Tenn.). Since the population in most of the region was higher in the 2010 census, population density likewise has increased in recent years—at least for the majority of counties.

## CHAPTER 2: AGE

Table 2.1: Population in the Appalachian Region by Age Group, 2006-2010

Population by Age Group	Total Population, 2006-2010	Percent of Population				Median Age (Years)
		Under Age 18	Ages 18-24	Ages 25-64	Ages 65 and over	
<b>United States</b>	<b>303,965,272</b>	<b>24.4</b>	<b>9.9</b>	<b>53.0</b>	<b>12.7</b>	<b>36.9</b>

<b>West Virginia (entire state)</b>	<b>1,840,802</b>	<b>21.2</b>	<b>9.2</b>	<b>53.9</b>	<b>15.8</b>	<b>41.1</b>

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

**Figure 2.1: Percent of Population in the Appalachian Region Under Age 18, 2006-2010**

Map Title: Percent of Population in the Appalachian Region Under Age 18, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Over the 2006-2010 period, the share of children and youth in the Appalachian population was slightly below the national average of 24 percent. And the percentage actually fell below 20 percent in one-eighth of the region's counties (mostly outside metropolitan areas). In another one-fifth of the counties, however, the proportion of children under age 18 matched or exceeded the national average. Most of these were in southern Appalachia. Results from the 2010 census suggest that children's share of the Appalachian (and U.S.) population continued to decline slightly in recent years.

**Figure 2.2: Percent of Population in the Appalachian Region Ages 18 to 24, 2006-2010**

Map Title: Percent of Population in the Appalachian Region Ages 18 to 24, 2006-2010

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

While the share of young adults (ages 18 to 24) in Appalachia roughly equaled the national average in the 2006-2010 period (as well as in the 2010 census), there were great variations within the region. For example, persons in this age group made up at least 15 percent of the population in 22 counties—most of which house colleges and universities. In contrast, 18-to-24-year-olds made up less than 7.5 percent of the population in 111 Appalachian counties. Of the counties in the latter group, 77 were outside metropolitan areas, suggesting a possible lack of opportunities in these communities for youth making the transition to adulthood.

Map Title: Percent of Population in the Appalachian Region Ages 25 to 64, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In both the United States and Appalachia, adults in the prime working ages (ages 25 to 64) made up a slight majority of all residents in the 2006-2010 period. In more than half of Appalachian counties, the percentage of persons in this age group exceeded the national average. But there were 36 counties in the region (30 of which were outside metropolitan areas) where 25-to-64-year-olds made up less than half of the population. Many of these counties house colleges and universities (and thus had a high share of their populations in the 18-to-24 age range.)

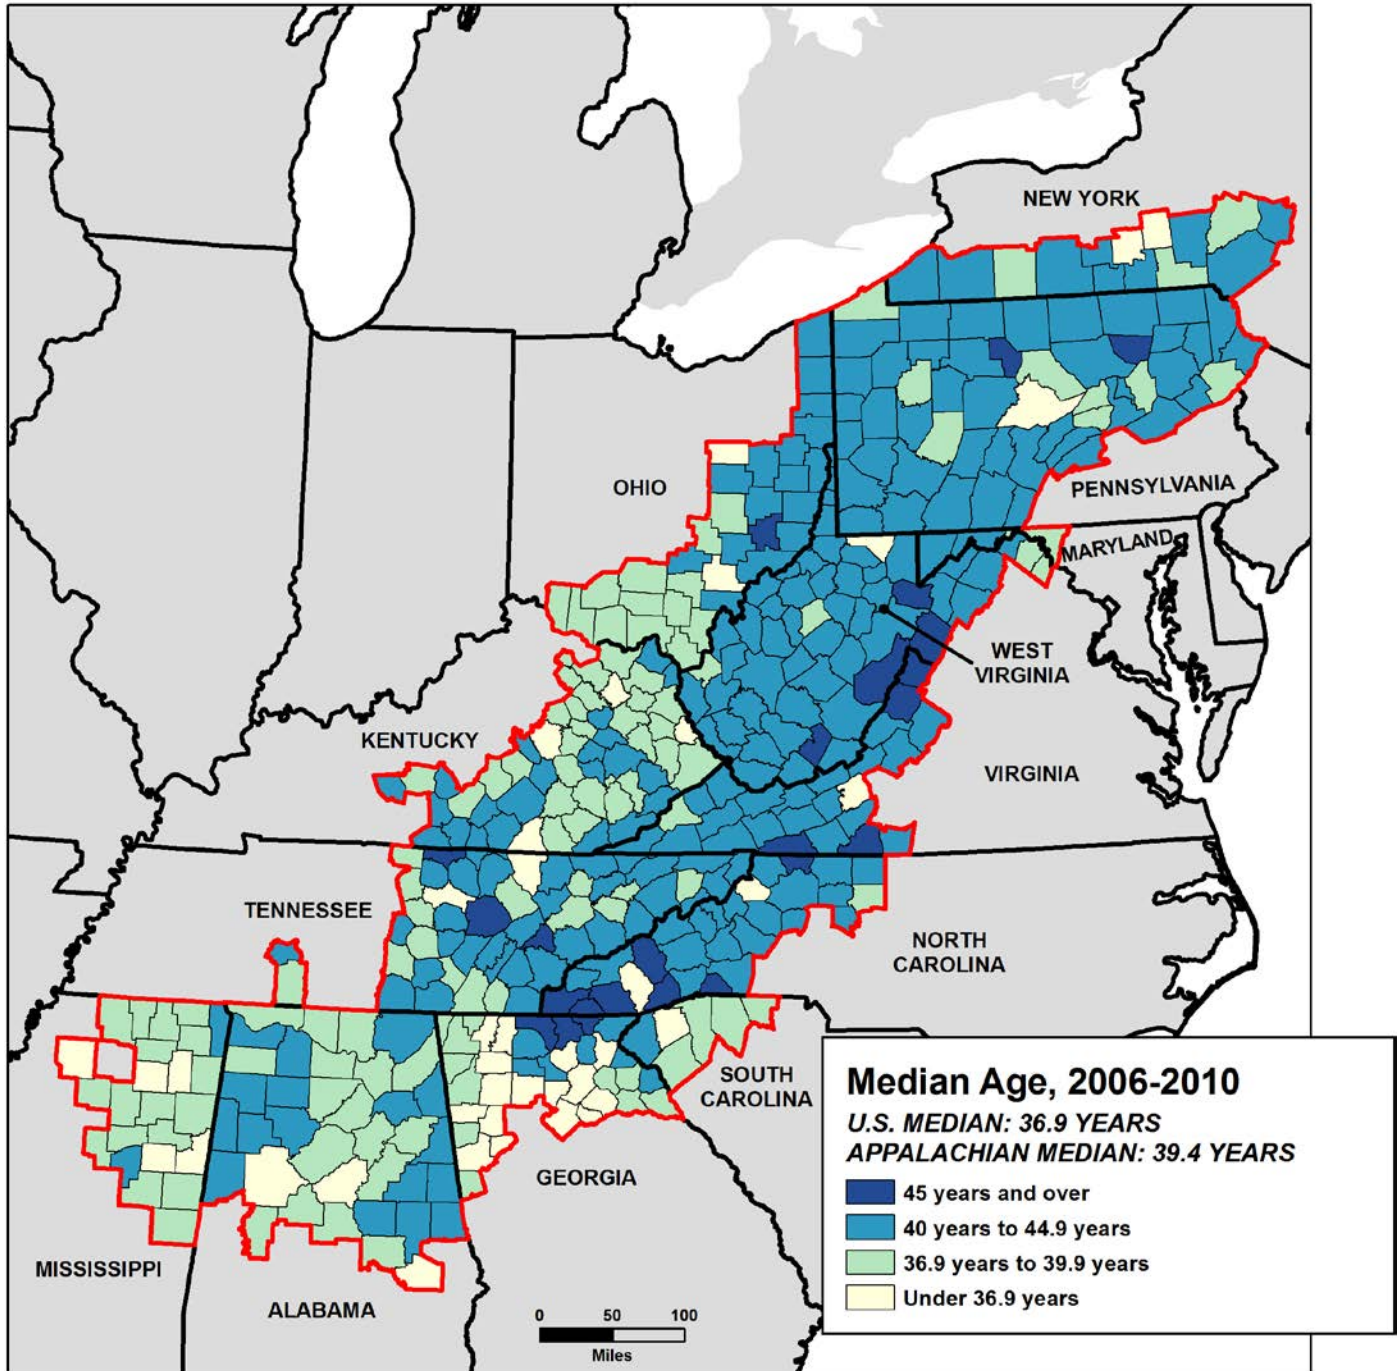

**Figure 2.4: Percent of Population in the Appalachian Region Ages 65 and Over, 2006-2010**

Map Title: Percent of Population in the Appalachian Region Ages 65 and Over, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

The Appalachian region—as well as 371 of its 420 counties—had a larger proportion of residents ages 65 and over in the 2006-2010 period than did the nation as a whole. In fact, older persons made up at least 15 percent of the population in more than three-fifths of Appalachia’s counties, most of which were outside metropolitan areas. In contrast, a majority of the 49 Appalachian counties with older population shares below the national average were either in metro areas or home to colleges and universities. And the 2010 census results indicate that the share of residents ages 65 and over continued to grow—both in Appalachia and the nation.

**Figure 2.5: Median Age of Persons in the Appalachian Region, 2006-2010**

Map Title: Median Age of Persons in the Appalachian Region, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

On average, the Appalachian population was two-and-a-half years older than that of the United States as a whole during the 2006-2010 period. Indeed, the median age of the population (the point at which half the population is older and half is younger) was at least 40 years in three-fifths of the region's counties. In 24 counties—almost all of which were outside metro areas—the median age was at least 45 years. Most of the counties with populations younger than the national median age were in southern Appalachia—the only subregion where the overall age structure approached that of the nation. Results from the 2010 census suggest that the Appalachian population continued to get older in recent years.

## CHAPTER 3: RACE AND HISPANIC ORIGIN

Table 3.1: Population in the Appalachian Region by Race and Hispanic Origin, 2006-2010

Population by Race and Hispanic Origin	Total Population, 2006-2010	Percent of Population				
		White Alone, Not Hispanic	Minority			
			Total	Black Alone, Not Hispanic	Hispanic or Latino	Other, Not Hispanic
<b>United States</b>	<b>303,965,272</b>	<b>64.7</b>	<b>35.3</b>	<b>12.2</b>	<b>15.7</b>	<b>7.4</b>

<b>West Virginia (entire state)</b>	<b>1,840,802</b>	<b>93.4</b>	<b>6.6</b>	<b>3.2</b>	<b>1.1</b>	<b>2.3</b>

"Other" includes these racial groups: (a) American Indian and Alaska Native alone; (b) Asian alone; (c) Native Hawaiian and Other Pacific Islander alone; (d) Some other race alone; and (e) Two or more races.

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

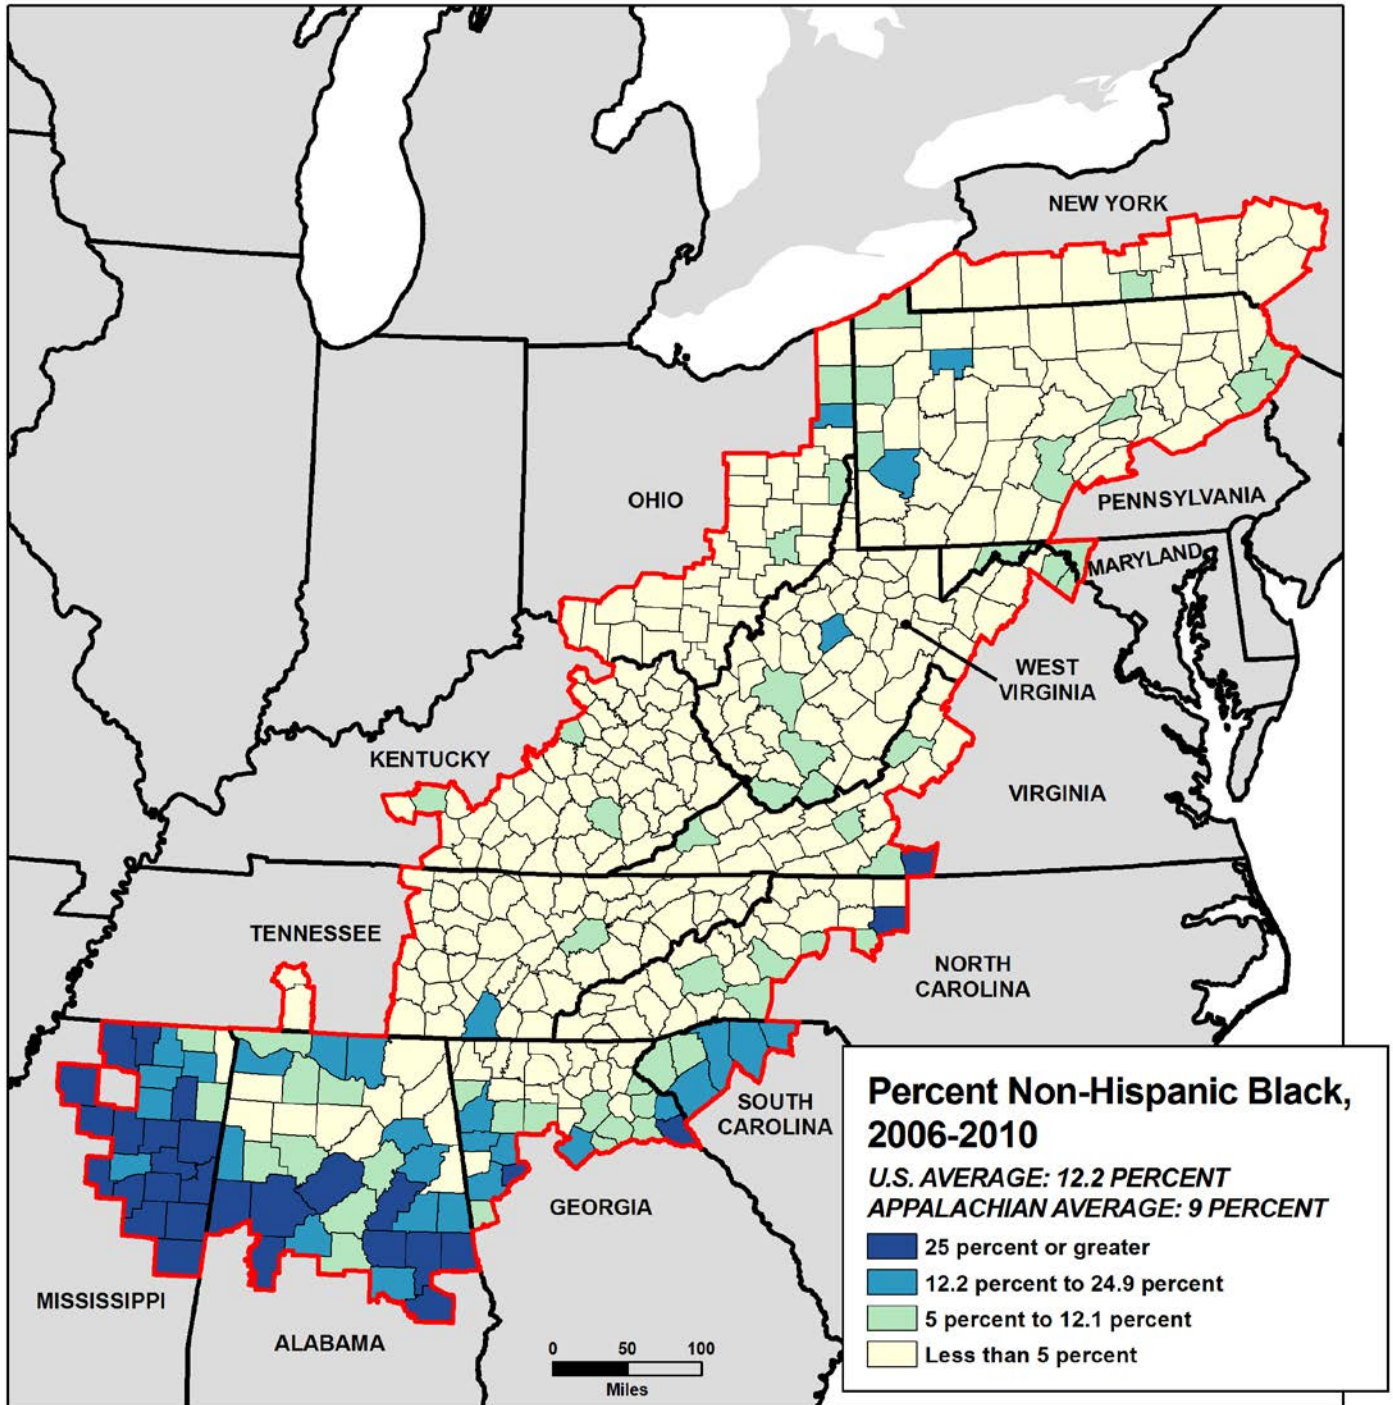

**Figure 3.1: Percent of Population in the Appalachian Region That Is Minority, 2006-2010**

Map Title: Percent of Population in the Appalachian Region That Is Minority, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

The Appalachian region is significantly less racially and ethnically diverse than the United States as a whole, and most parts of the region have remained far below the national average in their minority populations. In more than two-thirds of Appalachian counties, minorities (defined as anyone who identifies with a racial or ethnic group *other than* “white alone, not Hispanic”) made up less than 10 percent of the population during the 2006-2010 period. There were just 23 counties—all but one in southern Appalachia—where minorities’ share of the population matched or exceeded the national average. Yet racial and ethnic diversity is growing in Appalachia: The 2010 census reported that minorities’ share of the population was nearly a percentage point higher than it was in the 2006-2010 period.

Figure 3.2: Percent of Population in the Appalachian Region That Is Black Alone, not Hispanic, 2006-2010

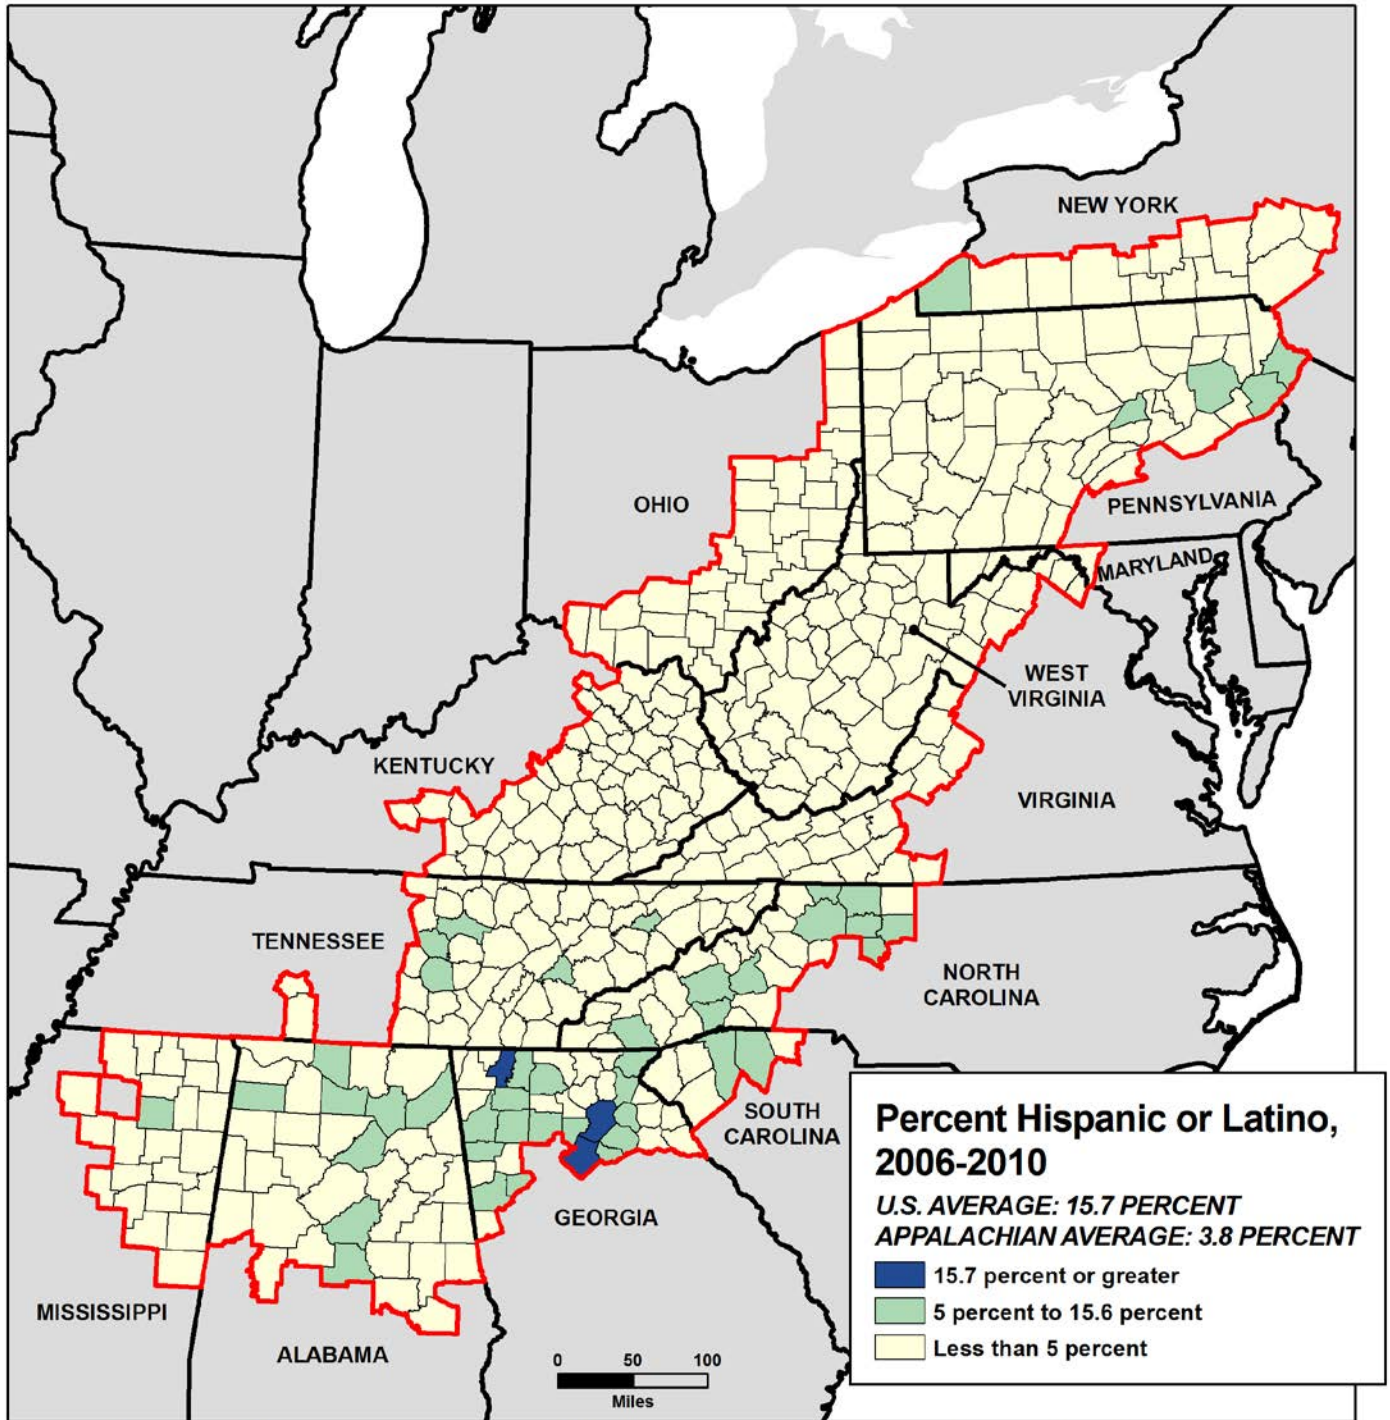

Map Title: Percent of Population in the Appalachian Region That Is Black Alone, not Hispanic, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Although non-Hispanic African Americans remained the largest single minority group in Appalachia during the 2006-2010 period, their share of the region’s total population was still lower than in the United States as a whole. Within the region, the largest proportions were in southern Appalachia—the only subregion where blacks’ share of the population exceeded the national average. Southern Appalachia also had virtually all of the 59 counties in the region where the black share of the population matched or surpassed that of the nation. At the other end of the spectrum, persons who are “black alone, not Hispanic” accounted for less than 5 percent of the residents in nearly three-fourths of Appalachian counties.

**Figure 3.3: Percent of Population in the Appalachian Region That Is Hispanic or Latino, 2006-2010**

Map Title: Percent of Population in the Appalachian Region That Is Hispanic or Latino, 2006-2010

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Although Hispanics have become the United States' largest minority group, they made up less than 1 in 25 residents in the Appalachian region during the 2006-2010 period. The county patterns reflect this fact as well, as Hispanics were at least 5 percent of the population in just 49 of Appalachia's 420 counties. Moreover, just three Appalachian counties (Gwinnett, Hall, and Whitfield—all in Georgia) had Latino population shares that matched or exceeded the national average. While small, the share of Hispanics in the Appalachian population almost certainly continued to grow throughout the 2000s: The 2010 census found higher Latino shares for both the United States and Appalachia than there were in the 2006-2010 period.

# CHAPTER 4: HOUSING OCCUPANCY AND TENURE

Table 4.1: Occupancy and Tenure of Housing Units in the Appalachian Region, 2006-2010

Housing Occupancy and Tenure	Total Number of Housing Units	Number of Occupied Housing Units	Percent of Total Housing Units		Percent of Occupied Housing Units

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

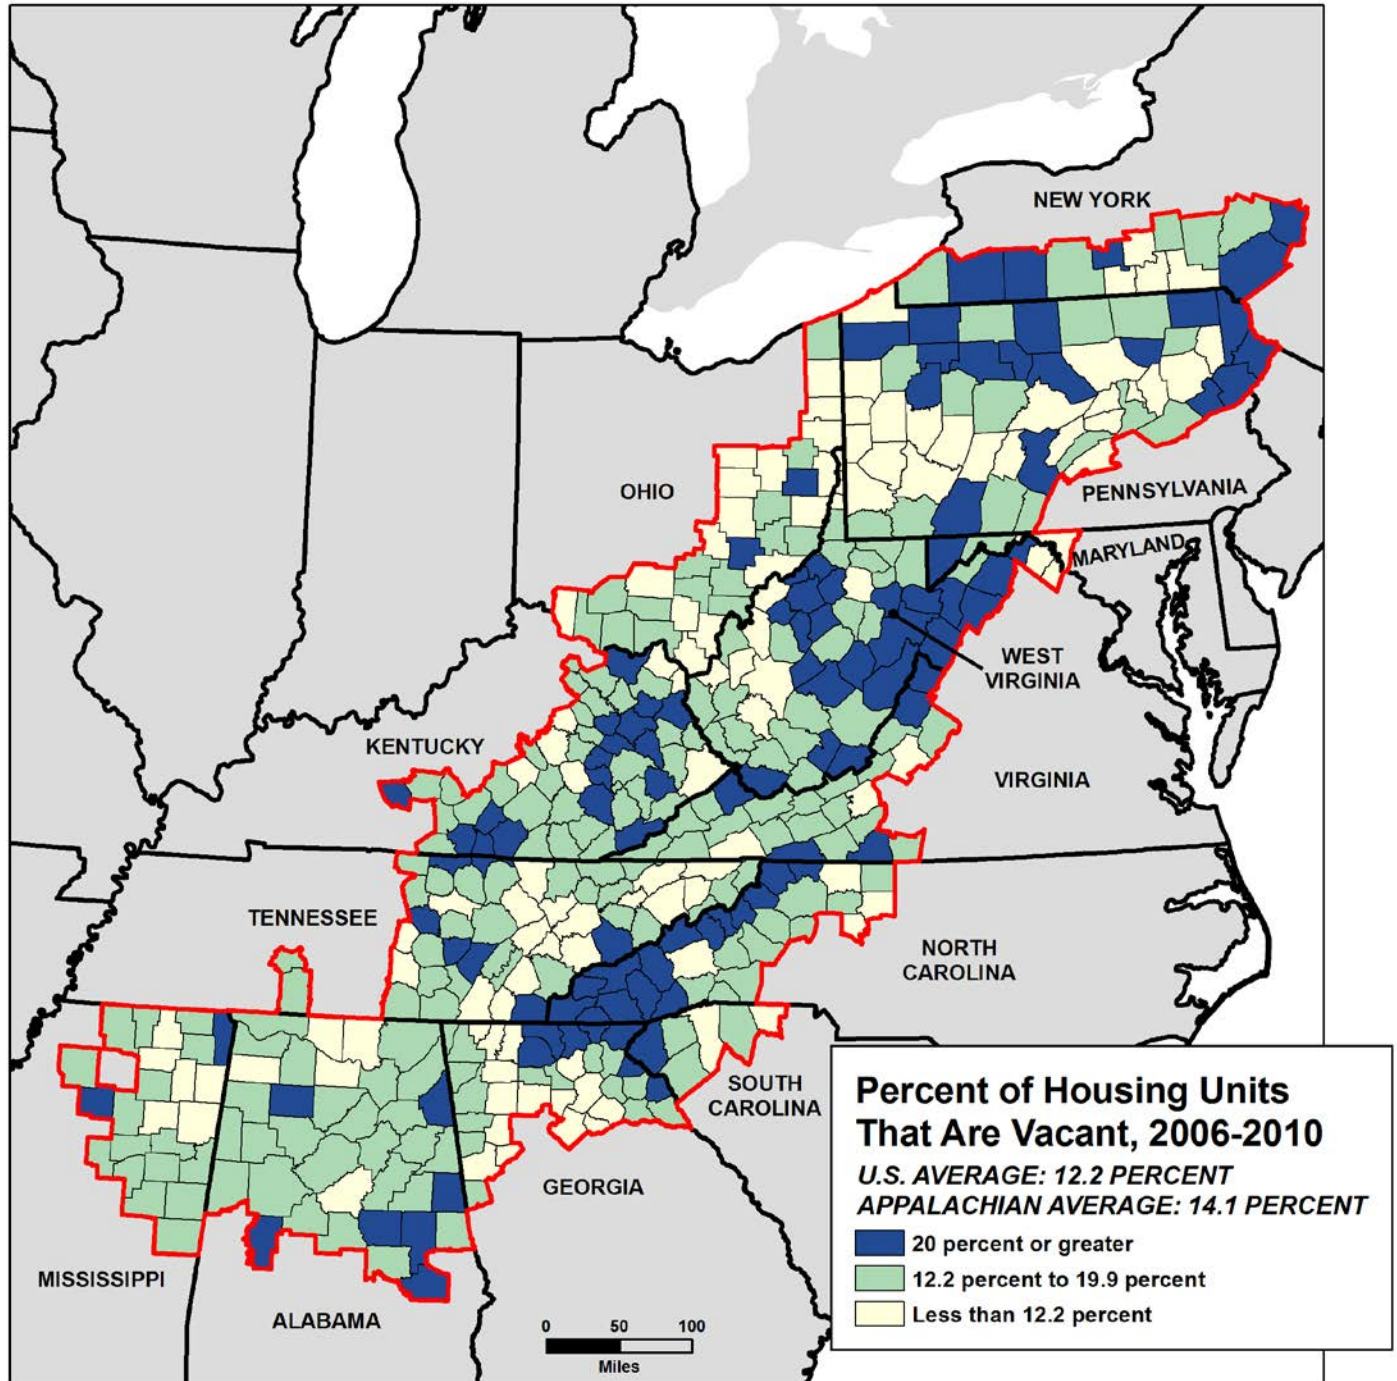

**Figure 4.1: Percent of Housing Units in the Appalachian Region That Are Occupied, 2006-2010**

Map Title: Percent of Housing Units in the Appalachian Region That Are Occupied, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Although the home occupancy rate during the 2006-2010 period was slightly lower in Appalachia than in the United States as a whole, rates varied within the region. On one hand, 119 of the 420 counties had occupancy rates that were at or above the national average. And while they were scattered throughout the region, 75 of these counties were in metropolitan areas. Conversely, less than four-fifths of housing units were occupied in 103 Appalachian counties—all but 13 of which lay outside metropolitan areas. It is important to note that the occupancy rates in the 2006-2010 period were about a full percentage point lower than they were in the 2010 census, suggesting that housing occupancy has increased in recent years after the end of the great recession in 2009.

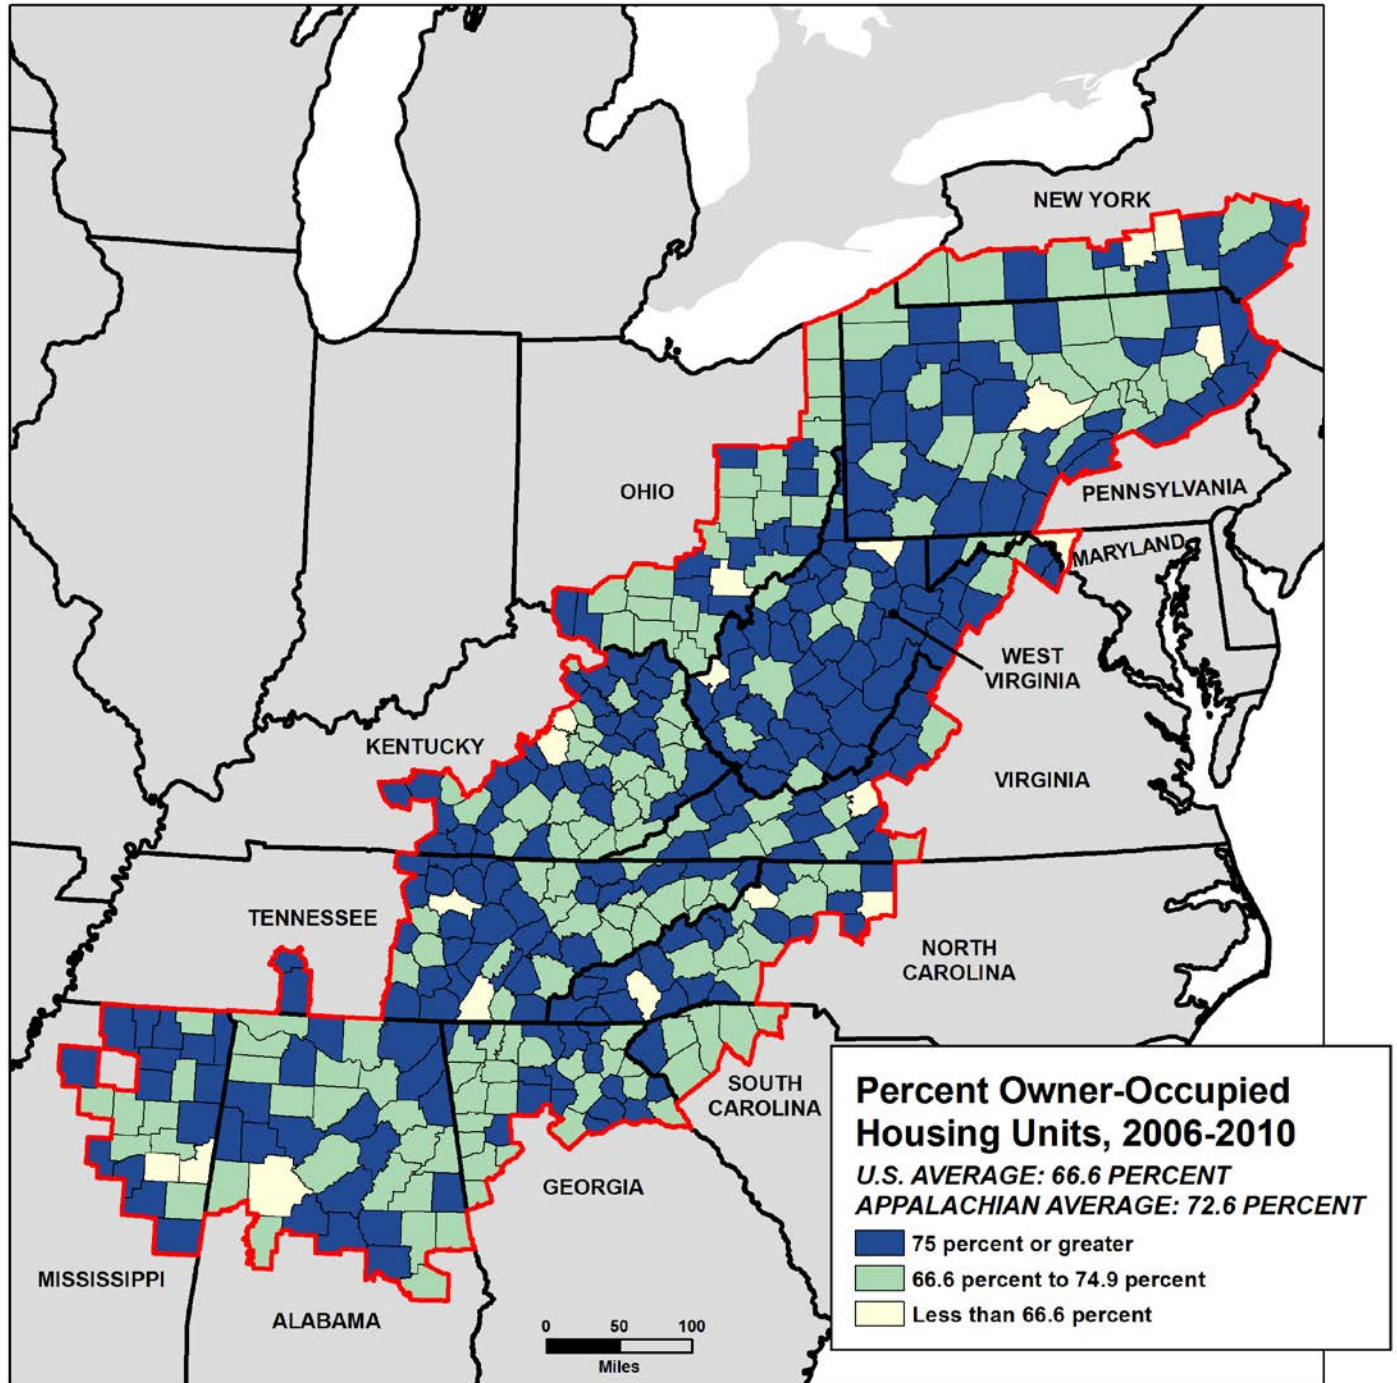

**Figure 4.2: Percent of Housing Units in the Appalachian Region That Are Vacant, 2006-2010**

Map Title: Percent of Housing Units in the Appalachian Region That Are Vacant, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In Appalachia, 14 percent of housing units were vacant during the 2006-2010 period, which is about two percentage points above the national average. (The rates for both the United States and Appalachia were about a full percentage point higher than what was observed in the 2010 census, suggesting that vacancy rates may have dropped by 2010 as the nation began to recover from the housing bust.) The vacancy rate varied within the region, however. While one-fourth of Appalachian counties (nearly all outside metropolitan areas) had vacancy rates exceeding 20 percent, another one-fourth (mostly in metro areas) had rates below the national average. It is important to note that in 152 of the 305 Appalachian counties with vacancy rates of 12.2 percent or more, at least one in three vacant units were designed for seasonal or occasional use, suggesting significant recreational, resort, or retirement activity in the community.

**Figure 4.3: Percent Owner-Occupied Housing Units in the Appalachian Region, 2006-2010**

Map Title: Percent Owner-Occupied Housing Units in the Appalachian Region, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In the 2006-2010 period, homeownership was more common in the Appalachian region than in the rest of the country. In all but 19 counties, the share of owner-occupied housing units matched or exceeded the national average. Indeed, the homeownership rate was at least 75 percent in 231 of Appalachia’s 420 counties. It is important to note that for some parts of the region, the high homeownership rates might be related to low levels of economic and residential mobility, the rise in the number and share of mobile homes among the housing stock, and to a lesser extent, the older age structure of the Appalachian population. Also useful to note is the fact that the share of owner-occupied units during 2006-2010 was a percentage point higher than observed in the 2010 census. This suggests a possible decline in homeownership by 2010, as owners shifted to rentals in response to the housing bust.

**Figure 4.4: Percent Renter-Occupied Housing Units in the Appalachian Region, 2006-2010**

Map Title: Percent Renter-Occupied Housing Units in the Appalachian Region, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

The share of renter-occupied housing units during the 2006-2010 period was well below the national average throughout Appalachia; in fact, it was less than 25 percent in more than half of the region’s counties. Among the 20 Appalachian counties where the share of renter-occupied units matched or exceeded the national average, most are home to colleges or universities, where students make up a fairly sizeable share of the population. It is interesting to note that the share of renter-occupied units was lower in the 2006-2010 period than it was in the 2010 census, suggesting an increase in rentals in response to the housing crisis.

## CHAPTER 5: EDUCATION

Table 5.1: Educational Attainment of Persons Ages 25 and Over in the Appalachian Region, 2006-2010

Education (Highest Level Attained)	Total Population Ages 25 and Over, 2006-2010	Percent of Population Ages 25 and Over				
		Less than High School Diploma	High School Diploma or More			
			Total	H.S. Grad, No Postsecondary Degree	Associate's Degree	Bachelor's Degree or More
<b>United States</b>	<b>199,726,659</b>	<b>15.0</b>	<b>85.0</b>	<b>49.6</b>	<b>7.5</b>	<b>27.9</b>

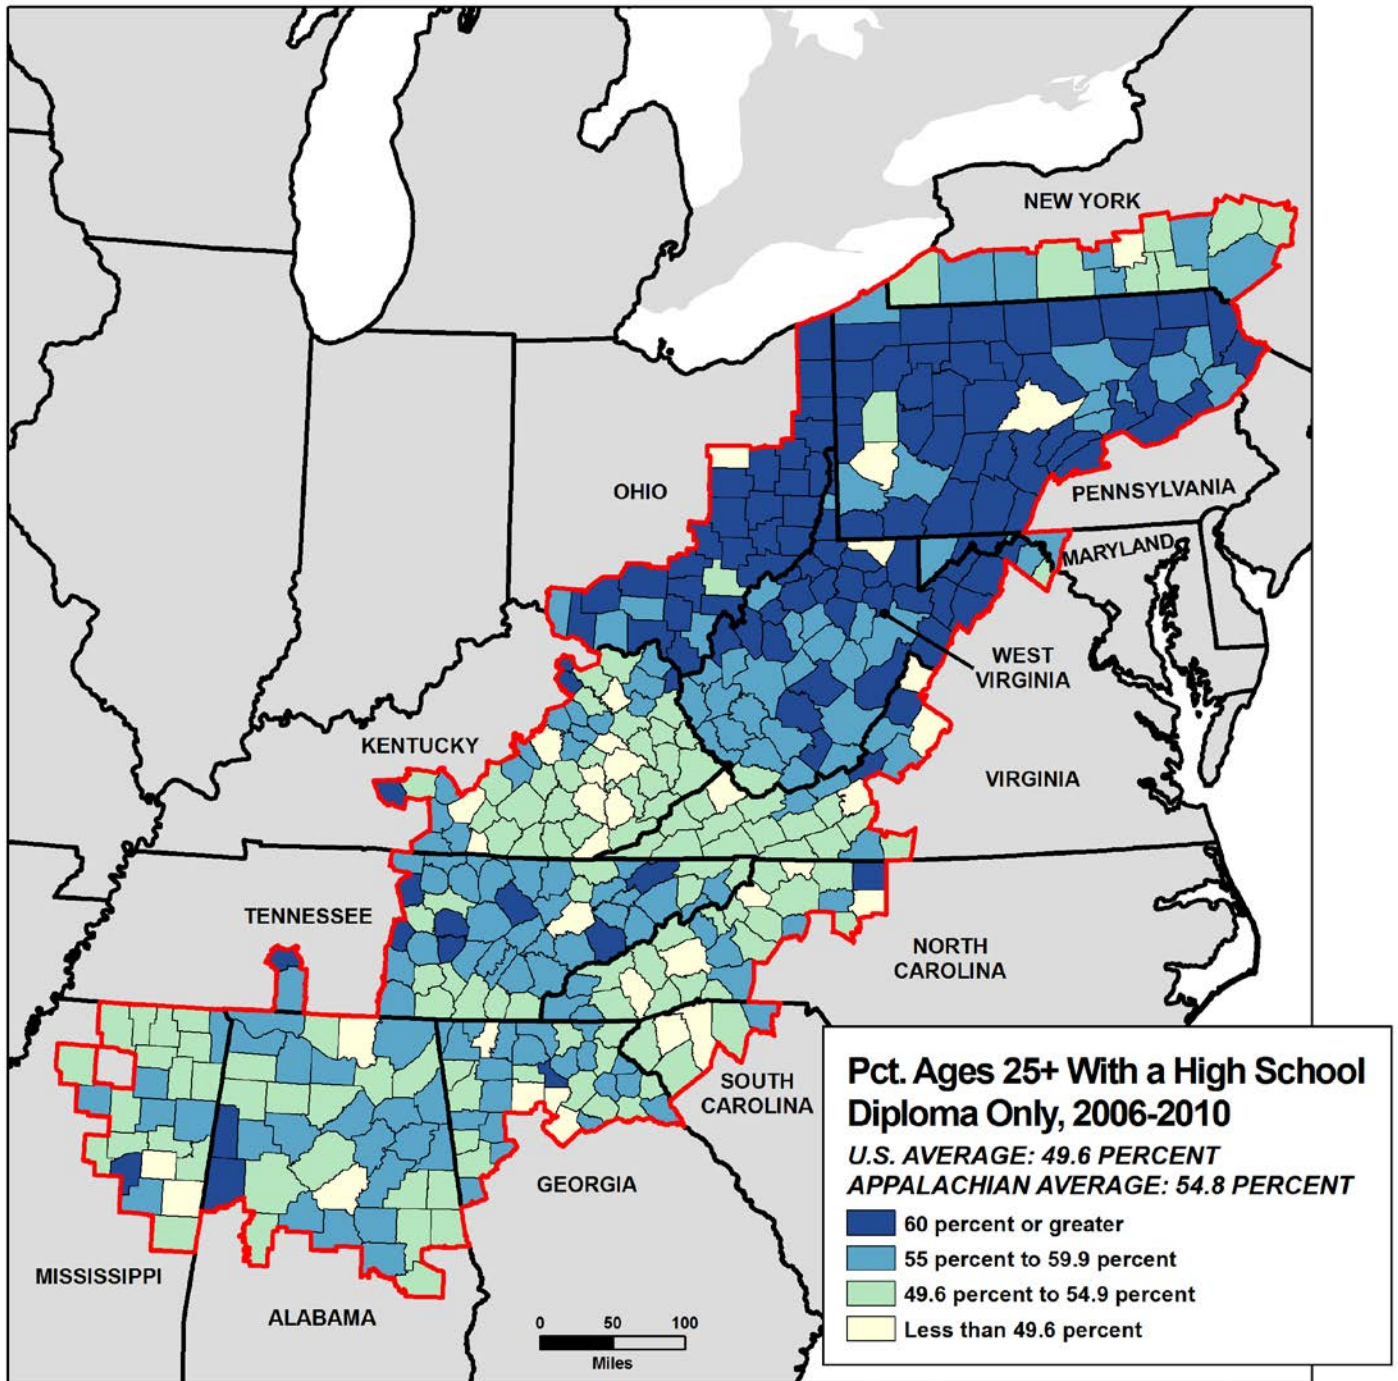

**Figure 5.1: Percent of Persons Ages 25 and Over in the Appalachian Region With a High School Diploma or More, 2006-2010**

Map Title: Percent of Persons Ages 25 and Over in the Appalachian Region With a High School Diploma or More, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Although the share of Appalachian adults with at least a high school diploma was slightly below the national average over the 2006-2010 period, it exceeded the national share in 99 counties in the region—two-thirds of them in northern Appalachia and three-fifths in metro areas. And both the regional and national shares were slightly higher than they were in the 2005-2009 period, possibly suggesting a continued trend toward high school completion among entering cohorts (at least between the non-overlapping years of 2005 and 2010). Yet in 141 counties, less than three-fourths of adults had completed high school; 112 of those were nonmetropolitan counties located in central, south central, and southern Appalachia.

**Figure 5.2: Percent of Persons Ages 25 and Over in the Appalachian Region With a High School Diploma but With No Postsecondary Degree, 2006-2010**

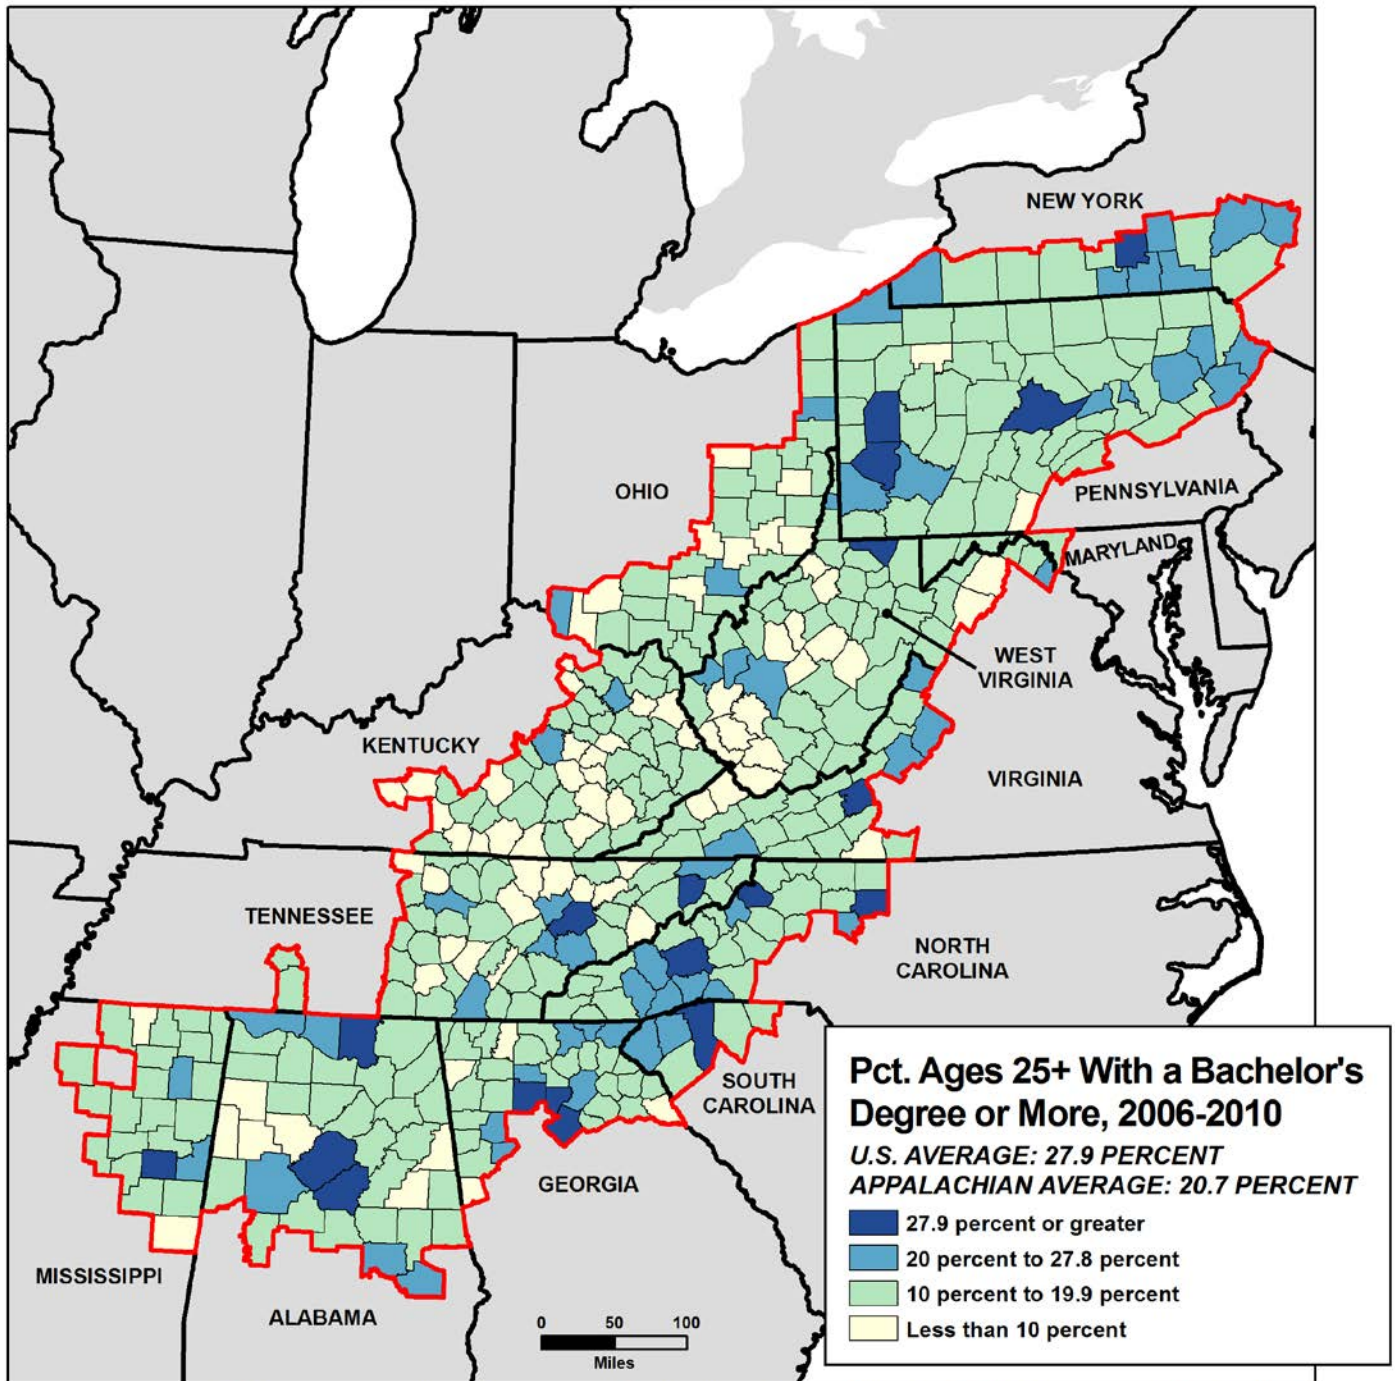

Map Title: Percent of Persons Ages 25 and Over in the Appalachian Region With a High School Diploma but With No Postsecondary Degree, 2006-2010

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In nine out of 10 Appalachian counties, at least half of the adult population had a high school diploma, but no postsecondary degree (including an associate’s degree) during the 2006-2010 period. Many of these adults had attended college but did not graduate, while others acquired vocational training. Conversely, many of the adults outside of this group did earn an associate’s or bachelor’s degree, while others never finished high school at all.

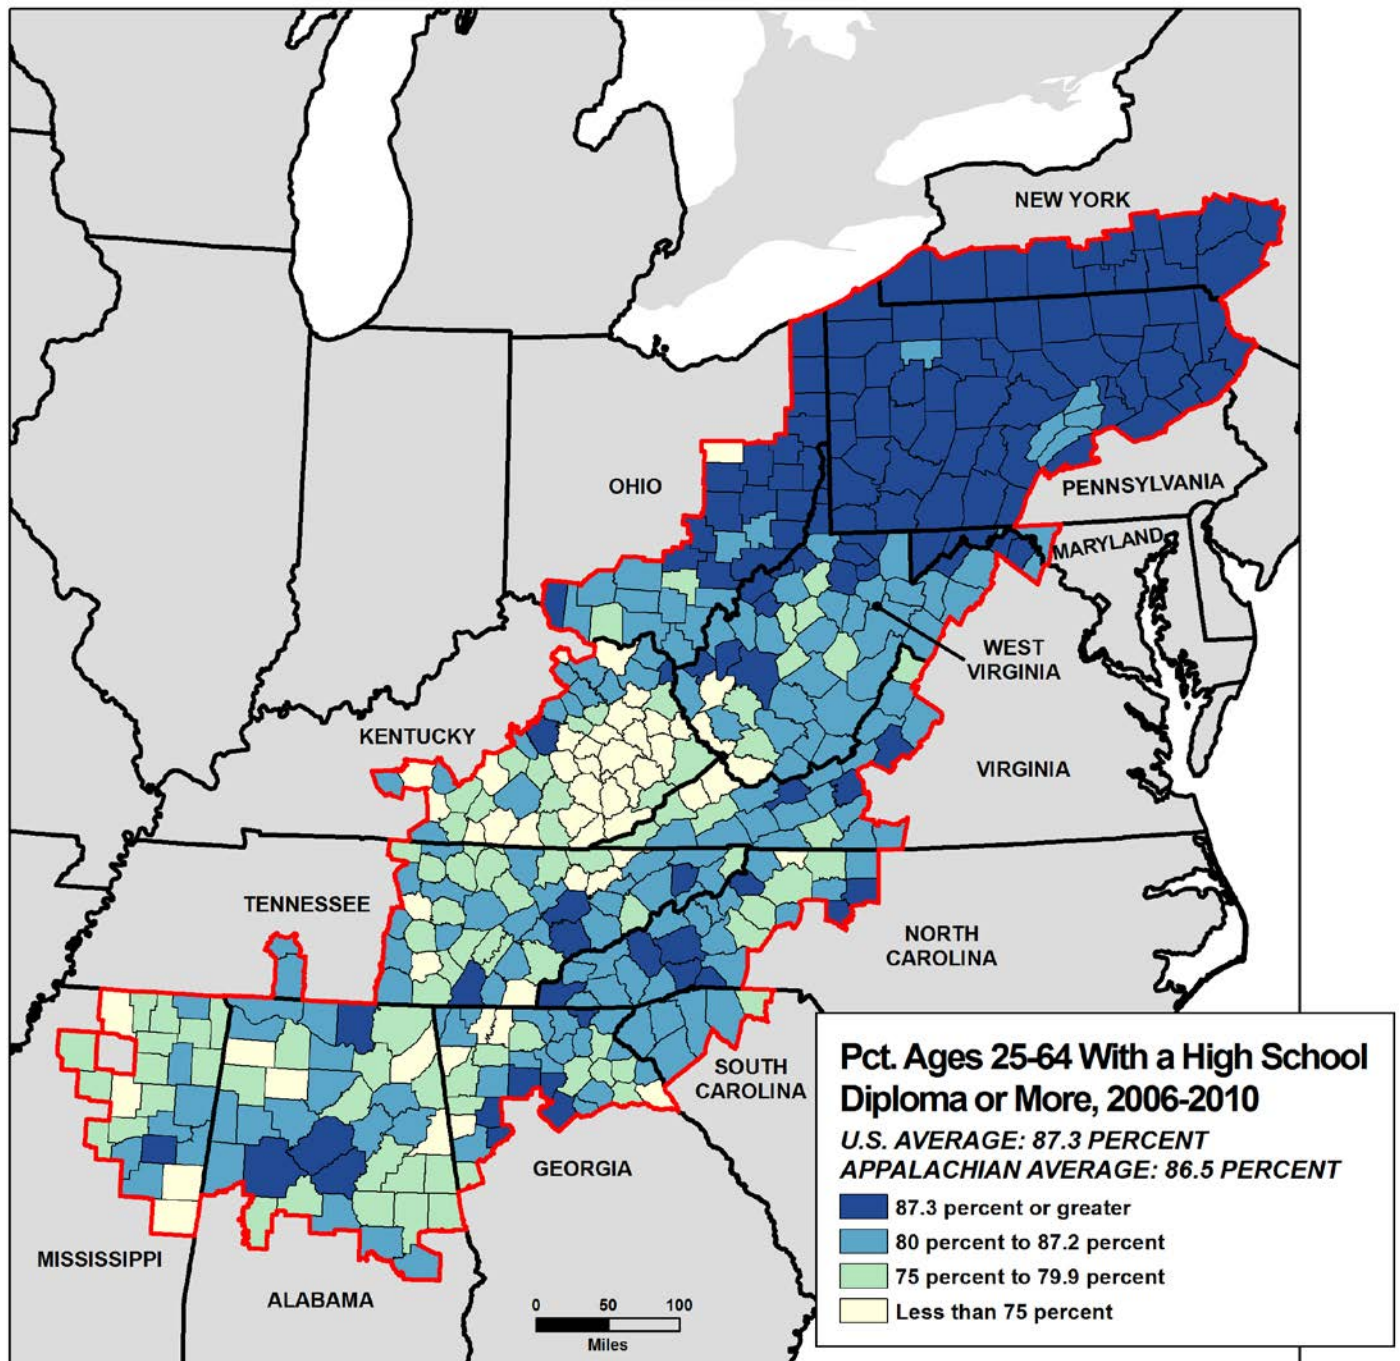

**Figure 5.3: Percent of Persons Ages 25 and Over in the Appalachian Region With a Bachelor's Degree or More, 2006-2010**

Map Title: Percent of Persons Ages 25 and Over in the Appalachian Region With a Bachelor's Degree or More, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In 401 of Appalachia's 420 counties, the share of adults with a bachelor's degree or more in the 2006-2010 period was lower than the national average of 28 percent. In fact, less than one-fifth of persons ages 25 and over were graduates of a four-year college or university in 342 Appalachian counties. And in 75 counties—nearly all of which were outside metropolitan areas and nearly half in central Appalachia—less than one in 10 adults had at least a bachelor's degree. The 19 counties where the percentage of college graduates matched or surpassed the national average were either in metropolitan areas or home to a well-known college or university. Most of these counties also experienced higher than average residential mobility rates. It is interesting to note that the share of adults with a four-year degree was slightly higher in the 2006-2010 period than it was in 2005-2009, which possibly suggests a continued trend toward greater educational attainment among cohorts entering this age group.

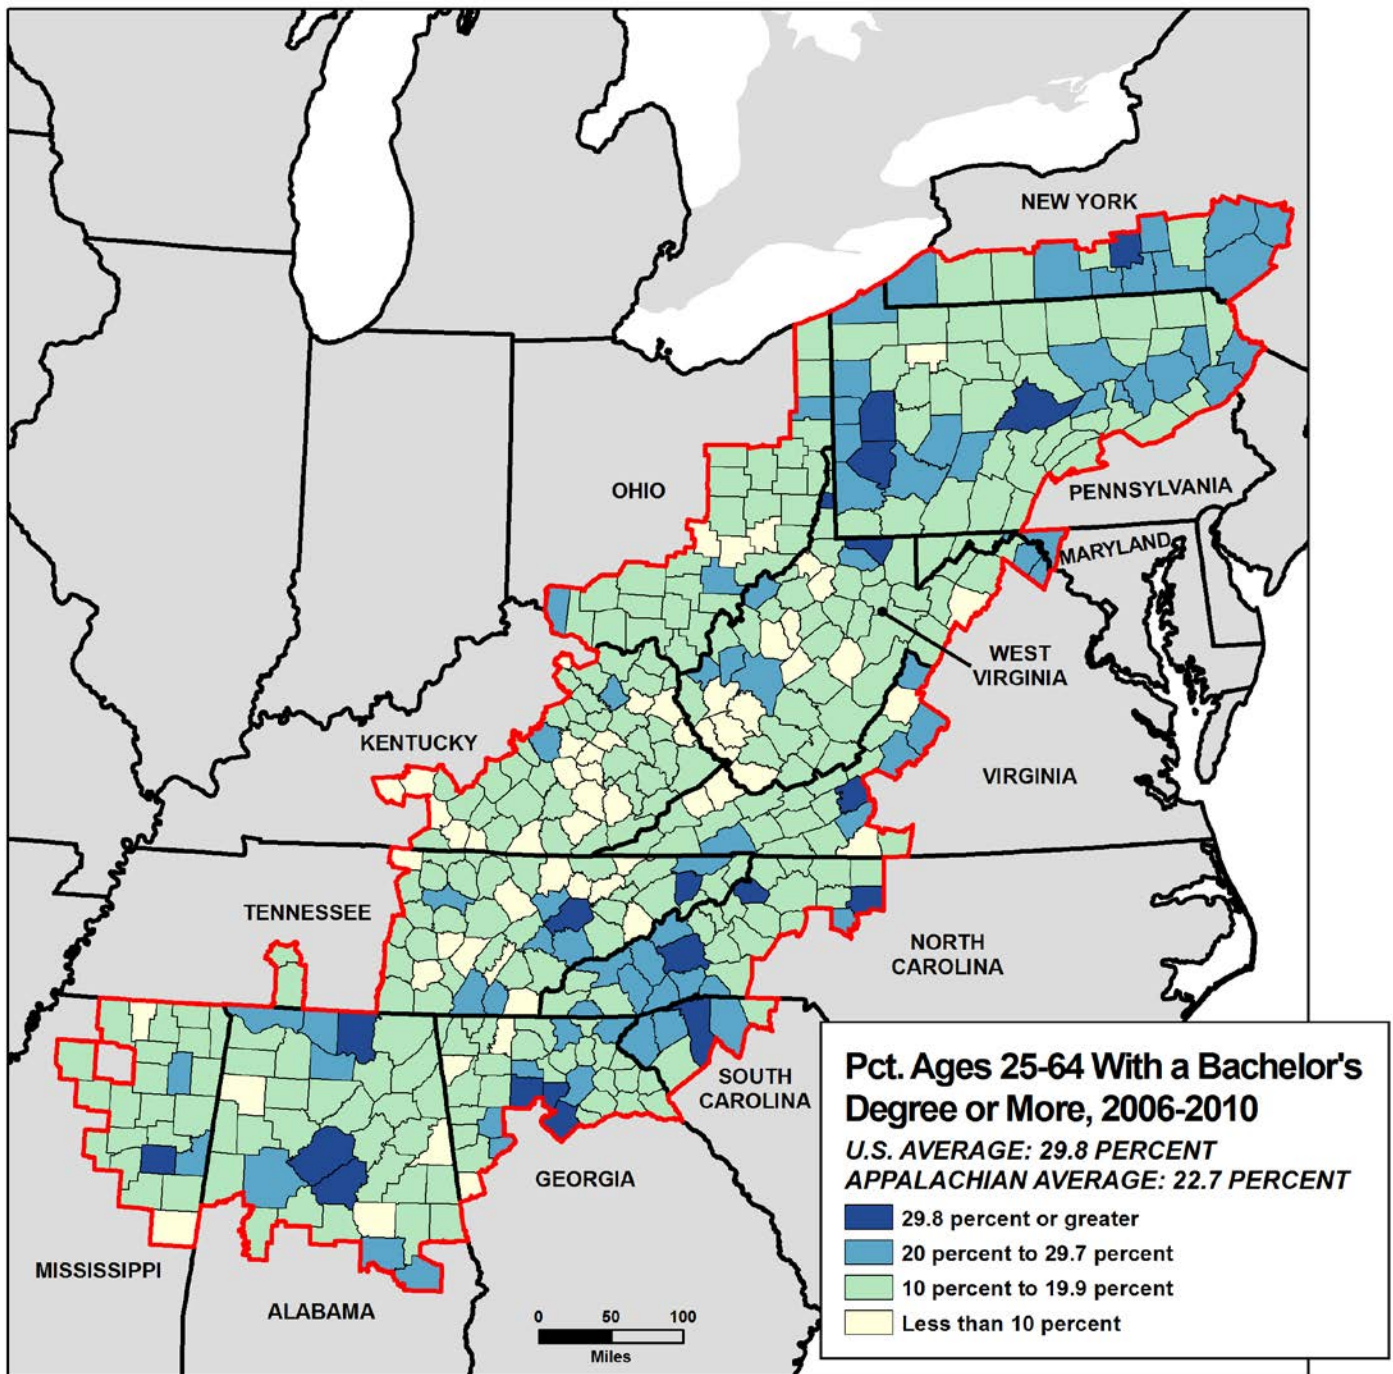

**Figure 5.4: Percent of Persons Ages 25 to 64 in the Appalachian Region With a High School Diploma or More, 2006-2010**

Map Title: Percent of Persons Ages 25 to 64 in the Appalachian Region With a High School Diploma or More, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In the 2006-2010 period, the percentage of working-age adults (ages 25 to 64) in the Appalachian region with at least a high school diploma was only slightly below the national average of just over 87 percent. (And both shares were slightly higher than they were in the 2005-2009 period.) In 127 of Appalachia’s 420 counties, the share matched or exceeded the national average. Nearly half of these 127 counties were outside metropolitan areas, and most were in northern or north central Appalachia. At the other end of the spectrum, less than three in four working-age adults had finished high school in 53 Appalachian counties—almost all of which were outside metropolitan areas, and more than half of which were in central Appalachia.

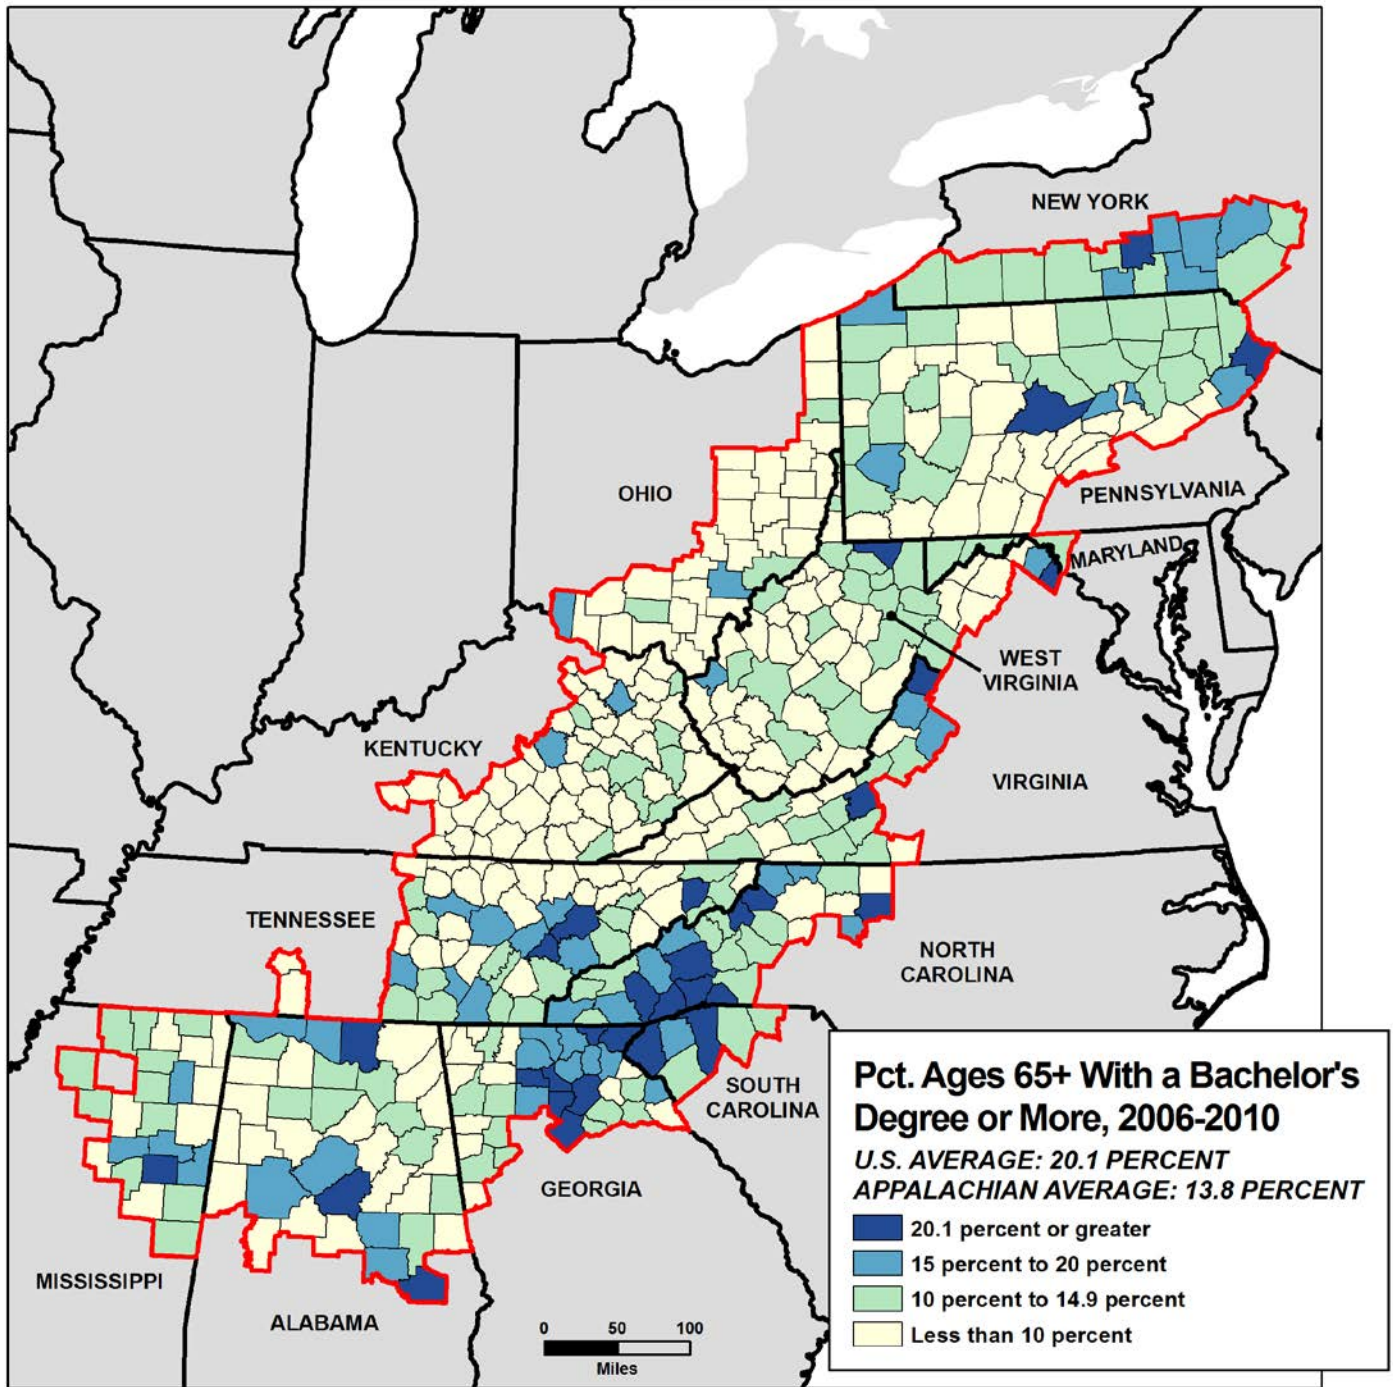

**Figure 5.5: Percent of Persons Ages 25 to 64 in the Appalachian Region With a Bachelor's Degree or More, 2006-2010**

Map Title: Percent of Persons Ages 25 to 64 in the Appalachian Region With a Bachelor's Degree or More, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Only 23 percent of the working age population in Appalachia had a bachelor's degree or more—seven percentage points lower than the U.S. average of 30 percent. This is a striking indicator of the lower educational level of the Appalachian workforce. Just 13 percent of working-age adults in central Appalachia had a bachelor's degree, as did only 15 percent of residents of rural Appalachian counties that were not adjacent to metro areas. In just 20 Appalachian counties—all either in metropolitan areas or home to a four-year college or university—the share of working-age adults ages 25 to 64 with at least a bachelor's degree matched or exceeded the national average in the 2006-2010 period. In contrast, there were 58 counties where less than one in 10 adults had a four-year degree. Of these, 48 were outside metropolitan areas, and 38 of those nonmetropolitan counties were in central, south central, and southern Appalachia. On the positive side, educational attainment levels for the United States and Appalachia were slightly higher than they were in the 2005-2009 period.

**Figure 5.6: Percent of Persons Ages 65 and Over in the Appalachian Region With a Bachelor's Degree or More, 2006-2010**

Map Title: Percent of Persons Ages 65 and Over in the Appalachian Region With a Bachelor's Degree or More, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

While one in five older Americans (ages 65 and over) had attained at least a bachelor's degree in the 2006-2010 period, less than one in 10 older adults had done so in nearly half of Appalachia's 420 counties. Not surprisingly, most of these were outside metropolitan areas and nearly one-third were in central Appalachia. (Just 8 percent of central Appalachia's older adults were college graduates.) Yet in 31 Appalachian counties, the share of older adults with a bachelor's degree or higher was at or above the national average. Most of these were in metropolitan areas or home to a college or university, but some others may be rural counties with significant retirement or seasonal activity, as suggested by the fact that much (if not most) of their vacant housing was for seasonal or occasional use.

# CHAPTER 6: LABOR FORCE, EMPLOYMENT, AND UNEMPLOYMENT

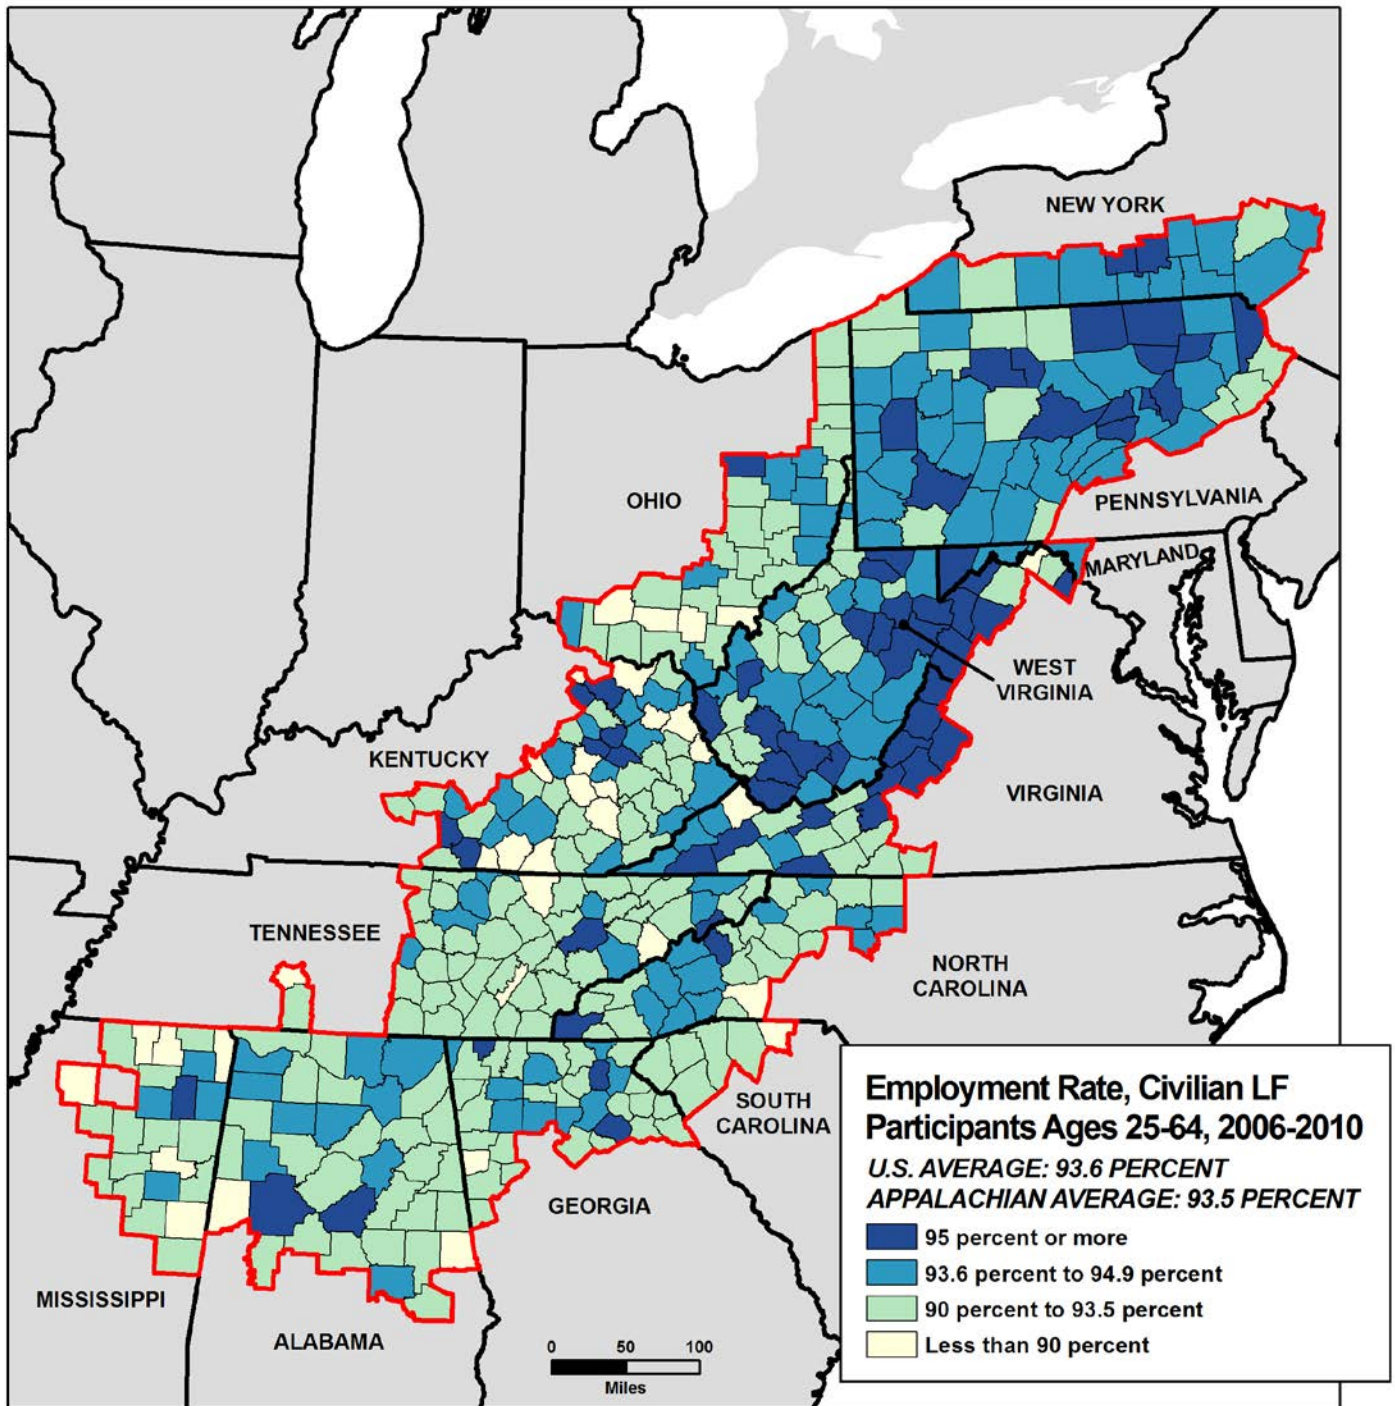

**Figure 6.1: Percent of Persons Ages 25 to 64 in the Appalachian Region Who Are In the Labor Force, 2006-2010**

Map Title: Percent of Persons Ages 25 to 64 in the Appalachian Region Who Are In the Labor Force, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In the 2006-2010 period (a period of both economic growth and decline), nearly 74 percent of Appalachia’s civilians in the prime working ages (ages 25 to 64) were in the civilian labor force, slightly below the U.S. average of 78 percent. In 44 Appalachian counties (scattered throughout the region), the share was above the national average; two-thirds of those counties were in metropolitan areas. On the other hand, there were 49 counties where less than 60 percent of 25-to-64-year-olds were in the civilian labor force, a full 18 percentage points below the national average. Nearly all of these counties were outside of metropolitan areas, with three-fourths in central Appalachia. Indeed, just 61 percent of working-age residents in central Appalachia were in the labor force. And there are signs of a possible connection between educational attainment and labor force participation. For example, in most of the counties with labor force participation rates matching or exceeding the U.S. average, the share of working-age adults with at least a high school diploma was also at or above the national average.

**Figure 6.2: Employment Rate for Civilian Labor Force Participants Ages 25 to 64 in the Appalachian Region, 2006-2010**

Among members of the civilian labor force ages 25 to 64, the employment rate in Appalachia during the 2006-2010 period (which incorporates not only the recent recession, but also years of economic growth) was almost identical to the national average. Although there were only slight differences among subregions and urban/rural county types, there was some variation among the counties. In nearly half of Appalachian counties, the employment rate matched or exceeded the national average, with about one in six counties having employment rates of at least 95 percent. Yet in 34 counties in the region, employment among 25-to-64-year-olds was less than 90 percent. Nearly all of these counties were outside metropolitan areas.

**Figure 6.3: Unemployment Rate for Civilian Labor Force Participants Ages 25 to 64 in the Appalachian Region, 2006-2010**

Map Title: Unemployment Rate for Civilian Labor Force Participants Ages 25 to 64 in the Appalachian Region, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Although unemployment in the Appalachian region among persons ages 25 to 64 was just above the national average during the 2006-2010 period, it was at least 10 percent in 36 counties. All but two of these counties were outside metropolitan areas, and nearly half were in central Appalachia. At the other end of the spectrum, unemployment was below 5 percent in 59 Appalachian counties; these were more evenly distributed among urban/rural types and subregions. There are indications of a connection between unemployment and educational attainment: In 25 of the 36 Appalachian counties with double-digit unemployment, less than four-fifths of 25-to-64-year-olds had a high school diploma or more. It is important to note that unemployment during the 2006-2010 period reflects not just patterns during the 2007-2009 economic downturn and post-recession recovery, but also patterns during the years of pre-recession economic growth.

Note: Poverty status is determined by a series of income thresholds that are determined by family size and composition. In 2010, the poverty threshold for a family of two adults and two children was \$22,113.

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

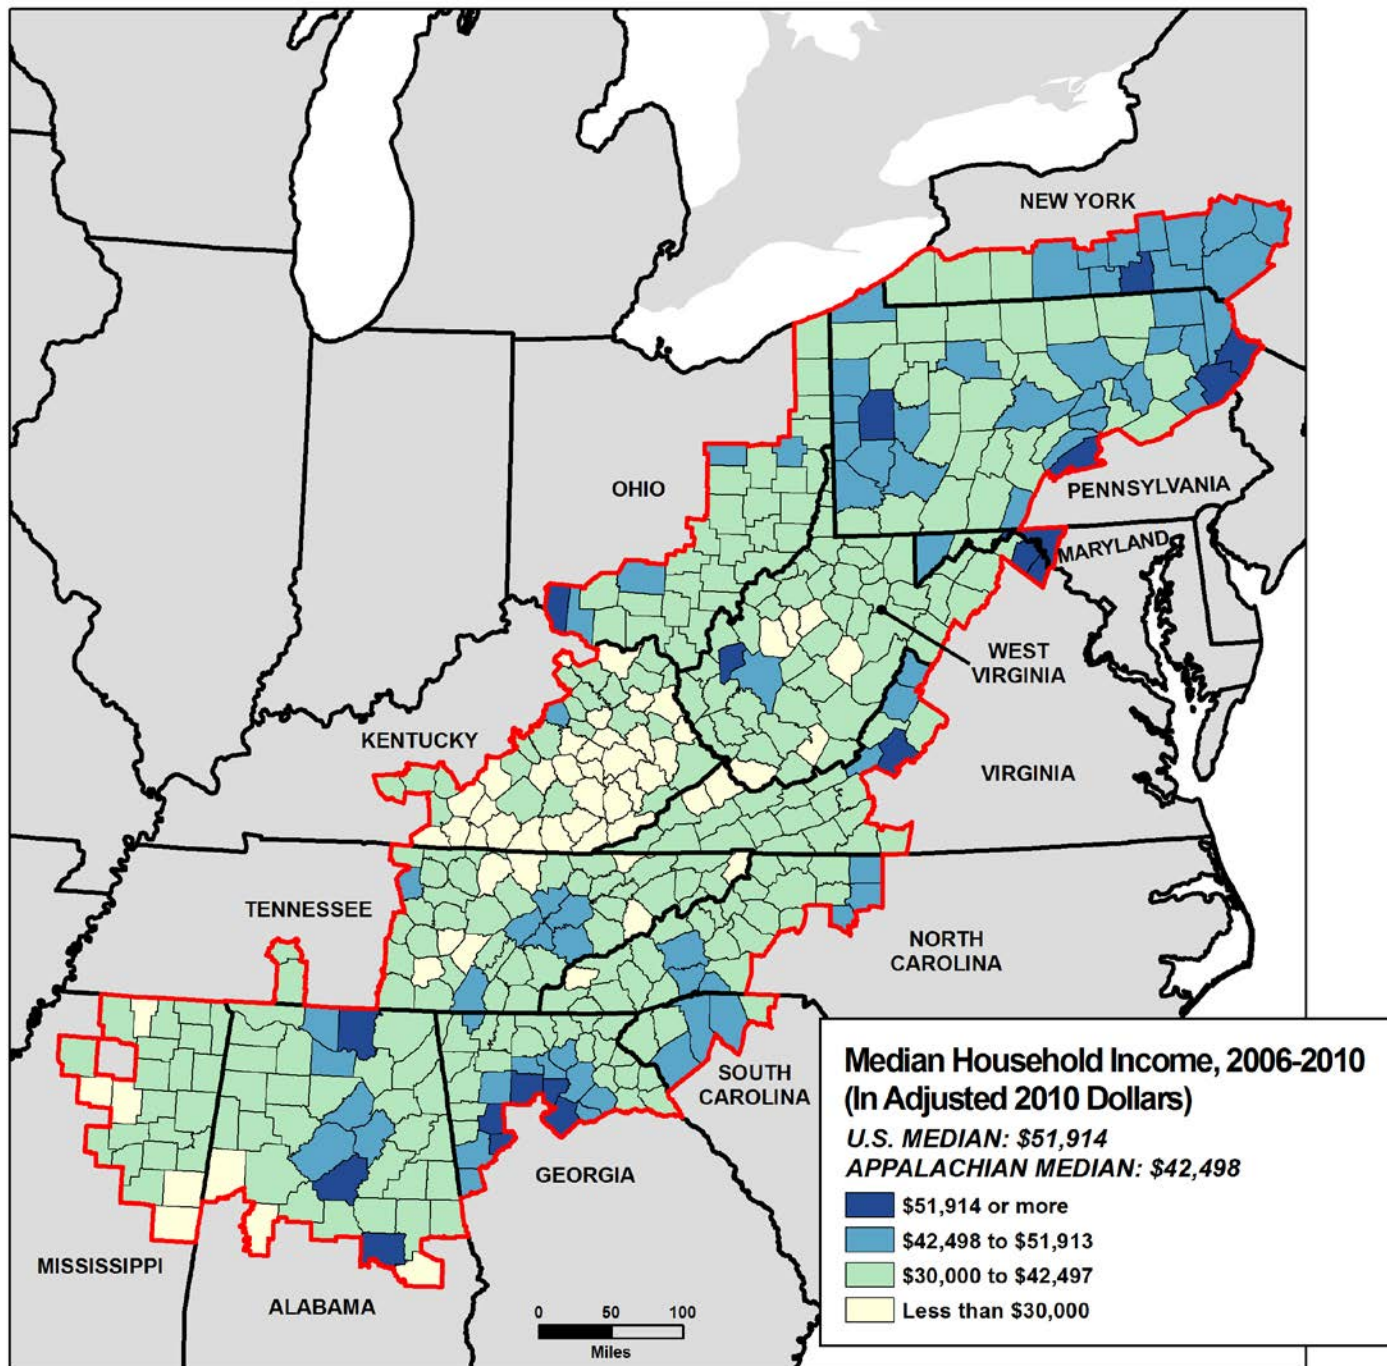

**Figure 7.1: Mean Household Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010**

Map Title: Mean Household Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In the 2006-2010 period (which covers the years before, during, and after the economic recession of 2007-2009), the mean income of Appalachian households was \$56,458, just 80 percent of the U.S. average. Patterns within the region show an even greater dispersion: In just nine of the region's counties, average household income matched or exceeded that of the nation as a whole. And in only 58 other counties, mean household income matched or surpassed the Appalachian average. Almost all of these counties were in metropolitan areas. In contrast, median income was less than \$40,000 in 45 counties; all of these counties were outside metro areas, and three-fourths of them were in central Appalachia.

Figure 7.2: Median Household Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010

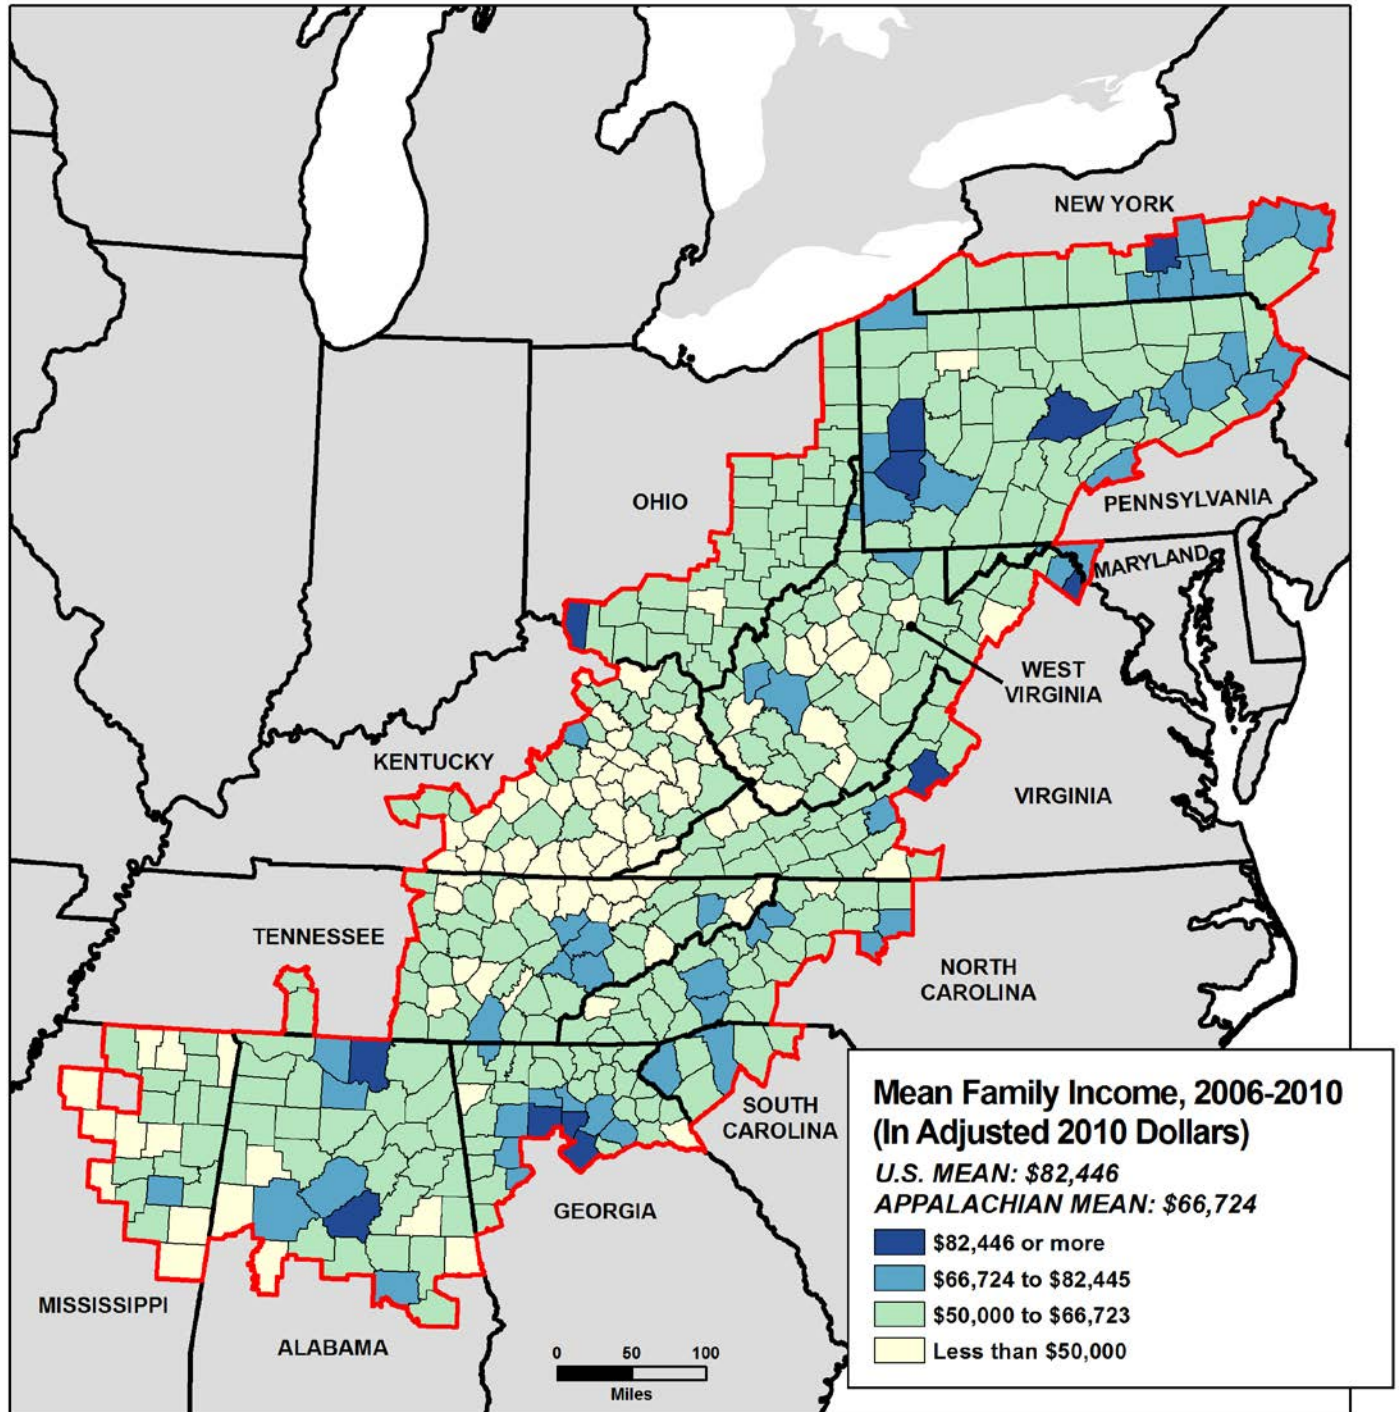

Map Title: Median Household Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

At \$42,498, median household income in Appalachia (the level at which half the households have higher incomes and the other half have lower incomes) was 82 percent that of the United States during the 2006-2010 period. While 19 counties in the region (almost all of them in metropolitan areas) had household incomes at or above the national median, another 56 had median household incomes below \$30,000. Nearly all the counties in the latter group were outside metropolitan areas (39 of them were not adjacent to any metro), and 37 of them were in central Appalachia. This development is not surprising: median household income was \$33,387 for the most rural counties and \$32,278 for central Appalachia. It is useful to note that the income levels displayed here reflect income received not only during the years of the 2007-2009 economic downturn, but also in the years before and after it.

**Figure 7.3: Mean Family Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010**

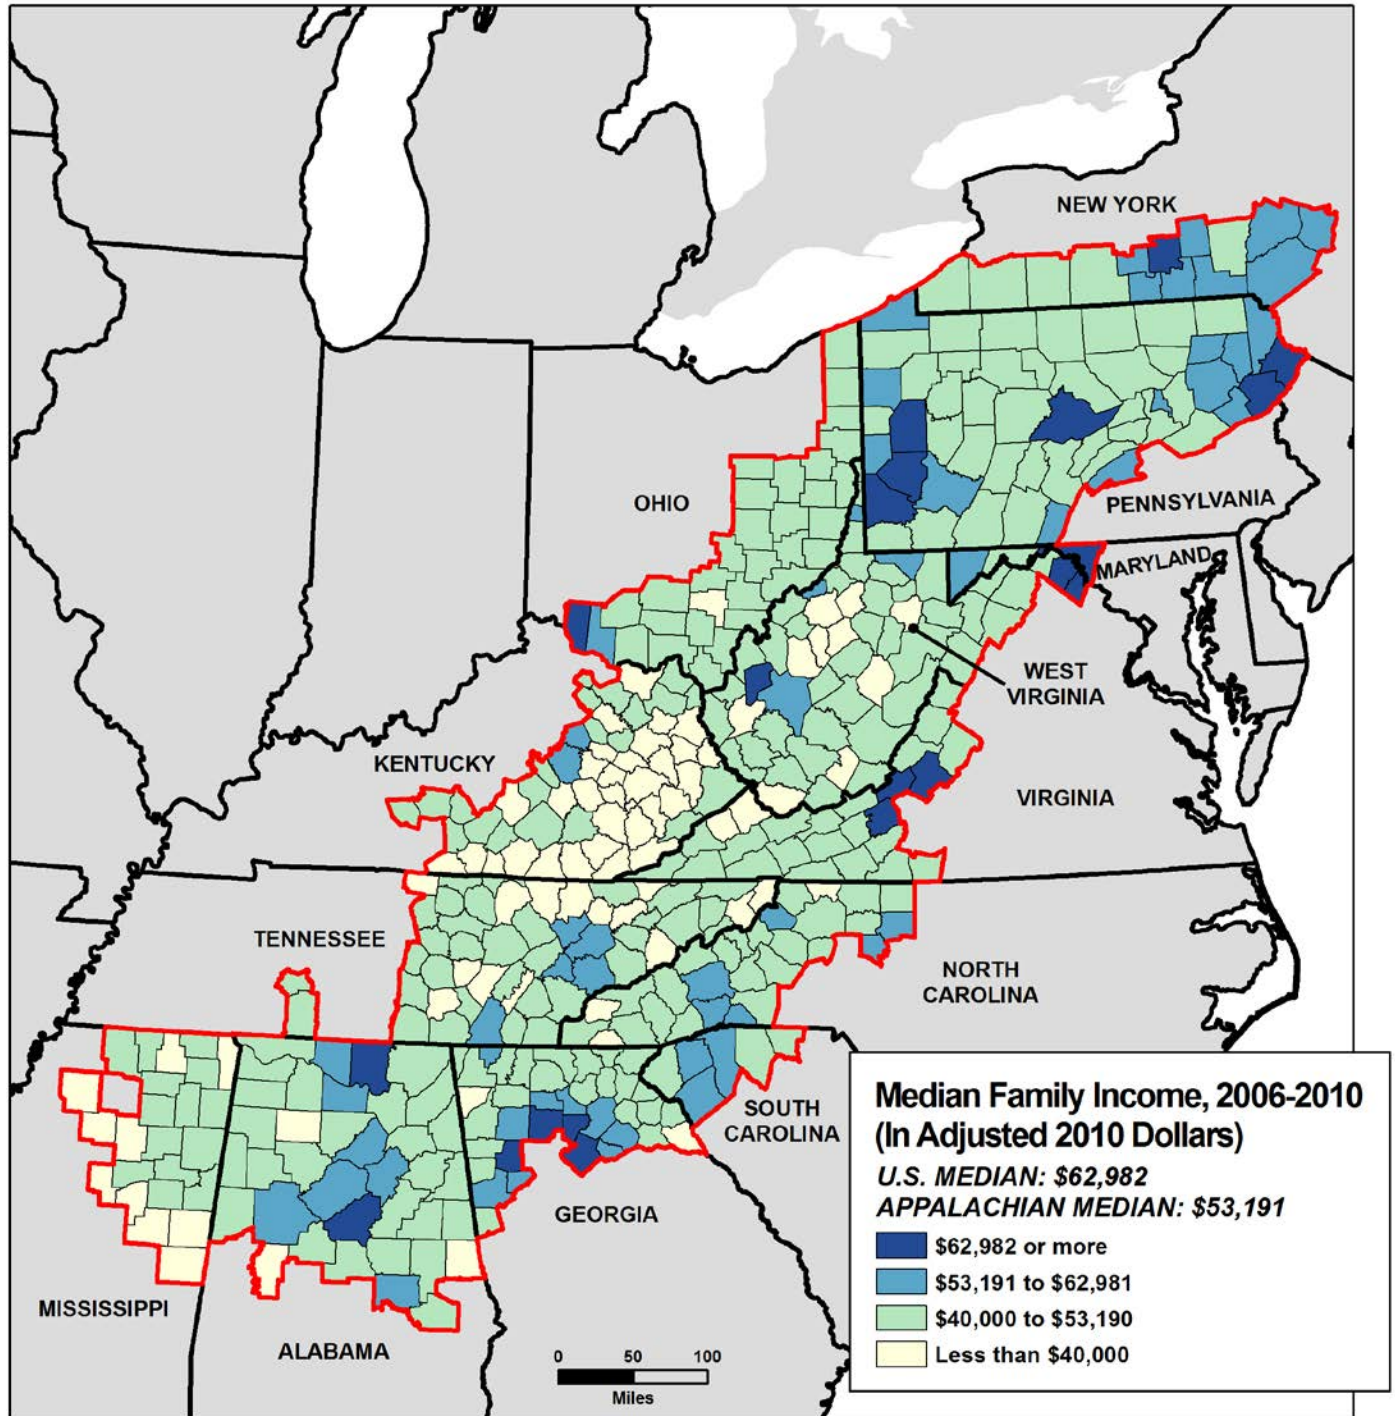

Map Title: Mean Family Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In only 12 Appalachian counties (all in metropolitan areas), the average income of families matched or surpassed the U.S. mean of \$82,446 for the 2006-2010 period. Indeed, there were only 66 counties (55 of which were part of metro areas) where mean family income was equal to or greater than the Appalachian regional average (\$66,724). In contrast, mean family income was less than \$50,000 in 87 Appalachian counties. Most of these counties were either in the most remote rural areas or in central Appalachia—mean family income over the 2006-2010 period (a time frame that includes extended periods of economic growth and decline) was less than \$55,000 for both areas.

Figure 7.4: Median Family Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010

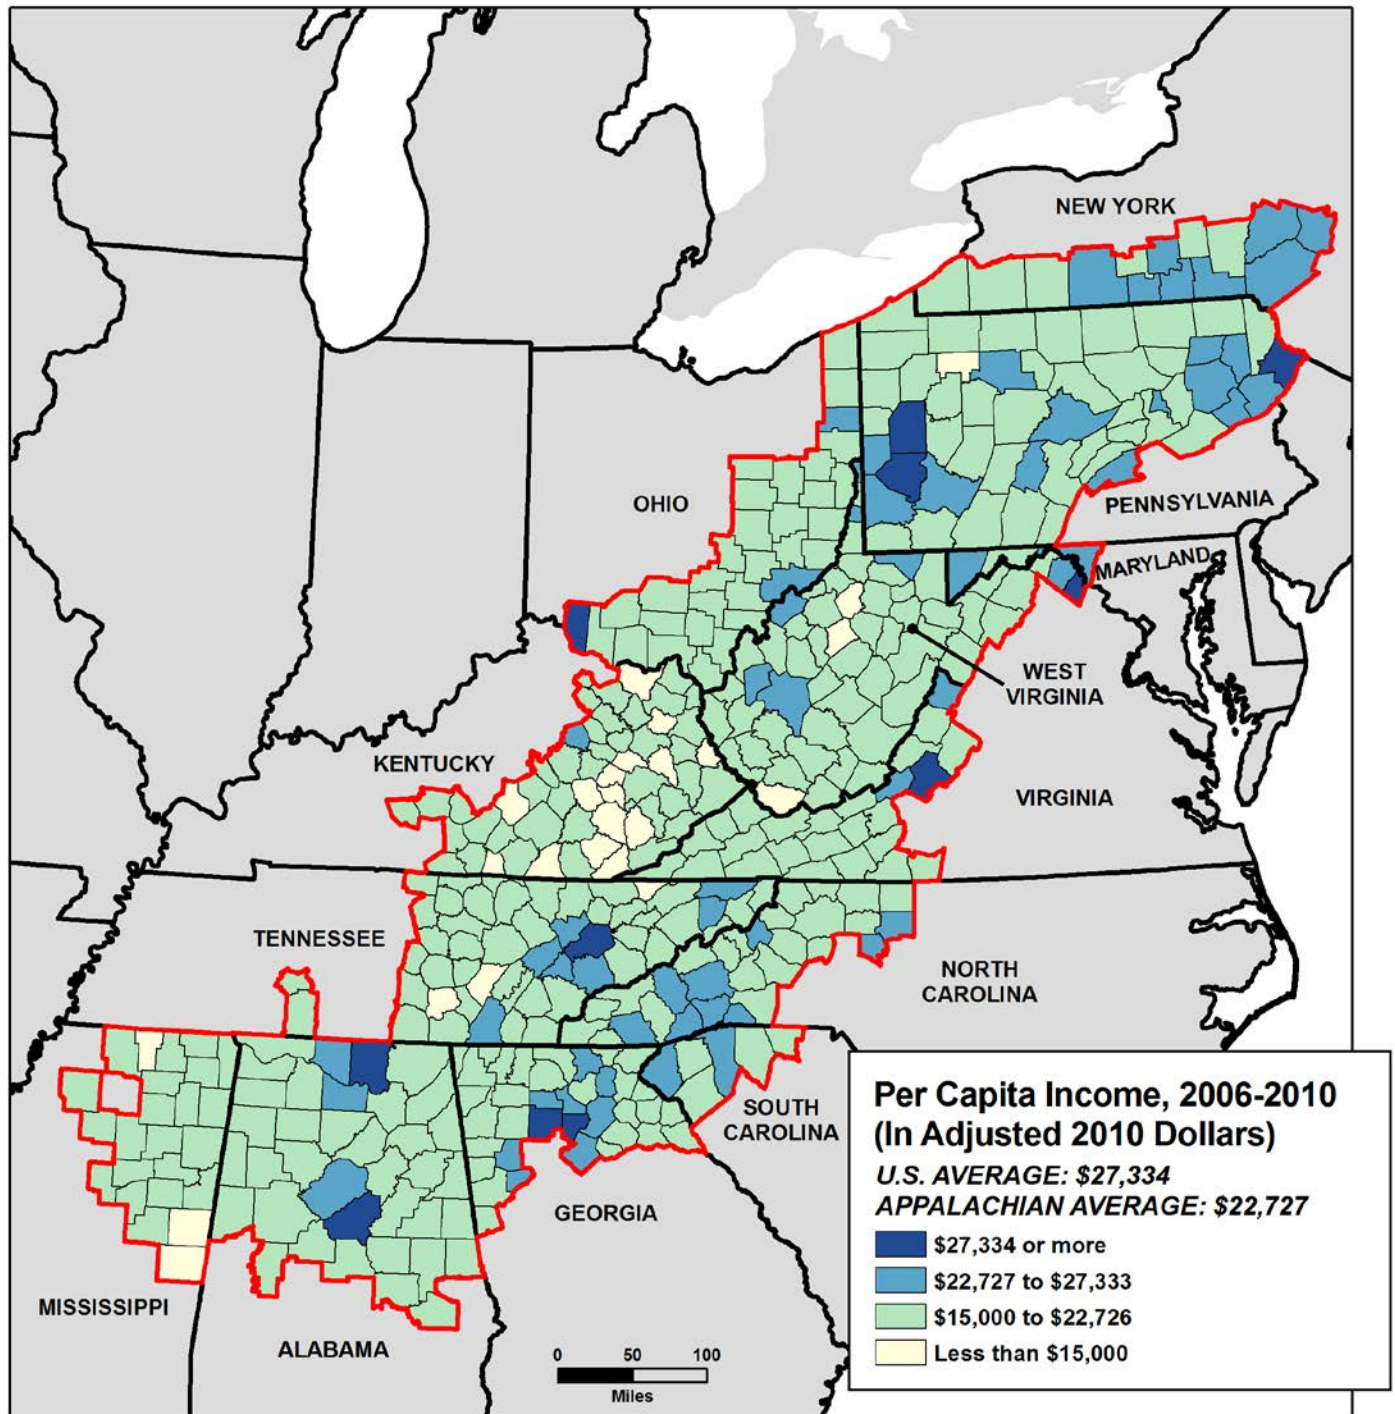

Map Title: Median Family Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In 21 Appalachian counties—nearly all in metro areas—median family income (the level where half of all families have higher incomes while the other half have lower incomes) was at or above the U.S. median of \$62,982 during the 2006-2010 period. In another 58 counties (again, mostly in metro areas), median income matched or exceeded the median for families in the Appalachian region (\$53,191). In contrast, median family income was less than \$40,000 in 76 counties. Of the counties in this latter group, 47 were rural counties not adjacent to a metro area (median family income in those counties was just over \$42,000), while 42 were in central Appalachia (where median family income was slightly less than \$41,000). It is important to note that the 2006-2010 period includes years of a booming U.S. economy, a major recession, and the beginnings of an economic recovery.

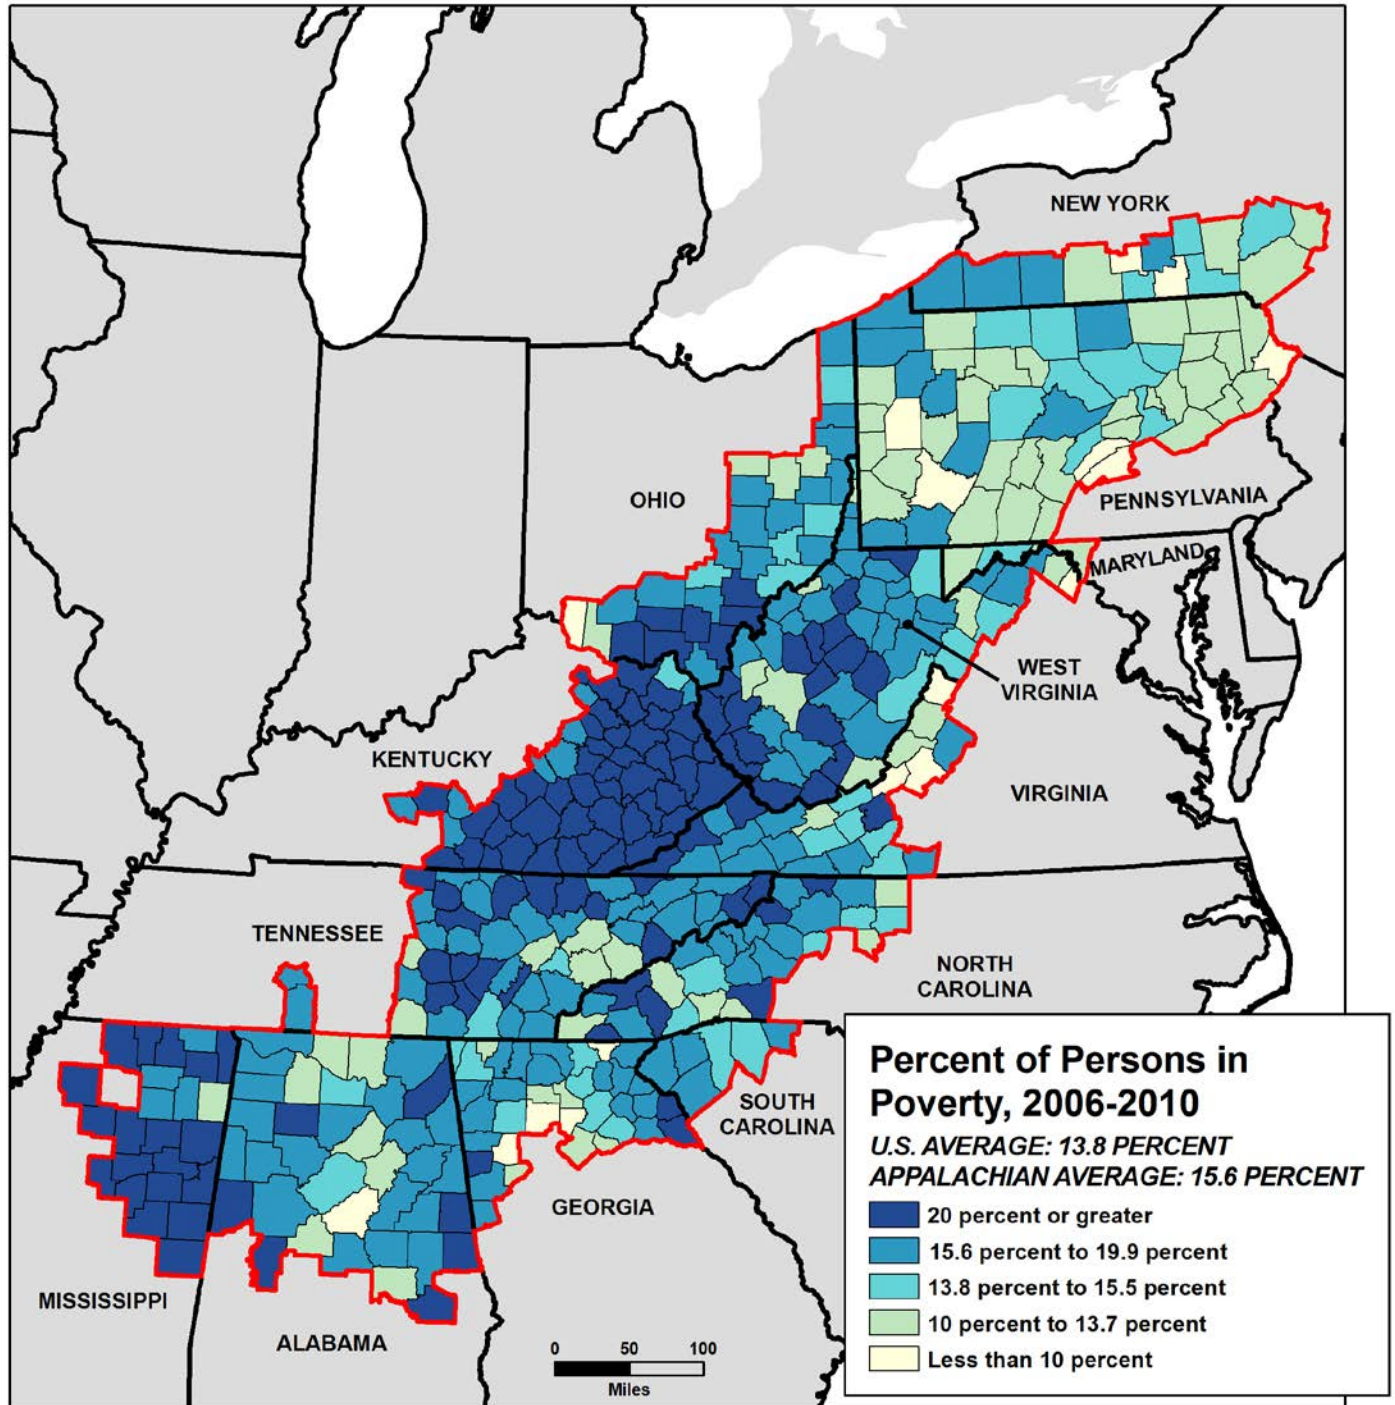

Figure 7.5: Per Capita Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010

Map Title: Per Capita Income in the Appalachian Region (In Adjusted 2010 Dollars), 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

At \$22,727, per capita income in the Appalachian region in the 2006-2010 period was 83 percent that of the U.S. average of \$27,334. And there was greater variance within the region: Per capita income was the same or higher than the national average in 11 Appalachian counties and was at or above the regional average in 64 others. Yet in 25 Appalachian counties, per capita income was less than \$15,000. As with other income measures, the counties with the highest per capita incomes generally were in metro areas, while the ones with the lowest were in rural areas, particularly in central Appalachia. Indeed, per capita income in the 2006-2010 period (which includes both pre- and post-recession years) was just \$18,317 in rural Appalachian counties as a whole, and just \$17,820 in central Appalachia.

Figure 7.6: Percent of Persons in the Appalachian Region in Poverty, 2006-2010

Map Title: Percent of Persons in the Appalachian Region in Poverty, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Over the 2006-2010 period (which includes years of economic growth and downturn), about one in six Appalachian residents lived below the poverty level (income below \$22,113 for a family of two adults and two children in 2010)—nearly two percentage points above the U.S. average. But there is much variation within the region: In 125 counties, at least one-fifth of persons were poor, yet in another 93 counties the poverty rate was below the national average. And there was a regional and urban/rural pattern: Nearly all of the counties with poverty rates exceeding 20 percent were outside of metropolitan areas, with about half in central Appalachia. In contrast, most of the counties with poverty levels below the U.S. rate were in metropolitan areas, and nearly half were in northern Appalachia.

## CHAPTER 8: MIGRATION

Table 8.1: Mobility Status of Persons Ages 1 and Over in the Appalachian Region, 2006-2010

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

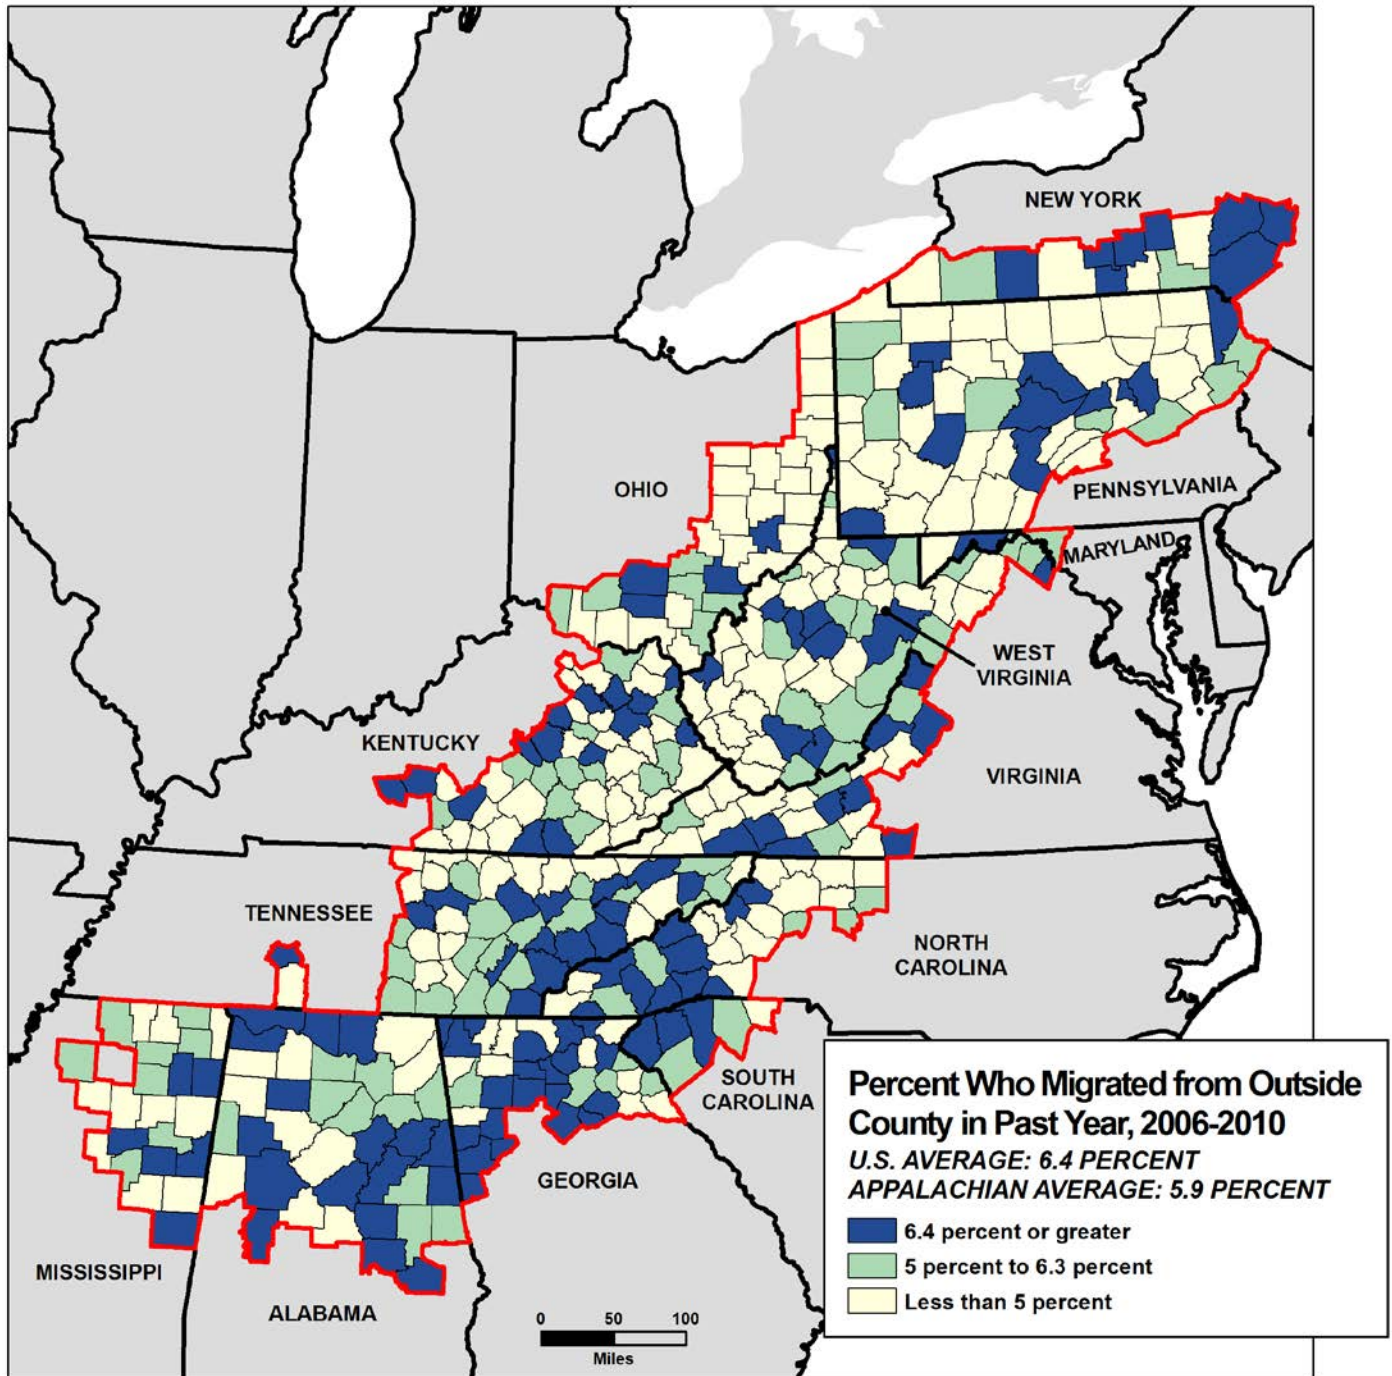

**Figure 8.1: Percent of Persons Ages 1 and Over in the Appalachian Region Who Had Moved in the Past Year, 2006-2010**

Map Title: Percent of Persons Ages 1 and Over in the Appalachian Region Who Had Moved in the Past Year, 2006-2010  
 Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

In the 2006-2010 period, mobility in both the United States and Appalachia showed signs of a slight decline from what was observed in the 2005-2009 period, which suggests an impact of the economic recession of 2007 to 2009. Although residential mobility in Appalachia was below the national average, the percentage of residents who moved in the past year exceeded the U.S. average in one-sixth of the region’s counties. Most of these counties were in southern or south central Appalachia, and nearly half were in metropolitan areas or were home to a four-year college or university. In one-fourth of the counties, less than 10 percent of the residents had moved in the previous 12 months; most of these counties were outside metro areas.

**Figure 8.2: Percent of Persons Ages 1 and Over in the Appalachian Region Who Had Migrated From Outside Their County of Residence in the Past Year, 2006-2010**

Map Title: Percent of Persons Ages 1 and Over in the Appalachian Region Who Had Migrated From Outside Their County of Residence in the Past Year, 2006-2010

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

Although people in Appalachia were slightly less likely to have migrated from outside their county of residence in the 2006-2010 period than Americans as a whole, residents in 131 of the region's counties were more likely to have done so. These counties were scattered throughout the Appalachian region and were distributed across all urban/rural types. In 192 counties, less than 5 percent of the residents had migrated from another county—three-fourths of these counties were outside metropolitan areas, and two-fifths of those were rural counties not adjacent to a metro area. Out-of-county migration patterns were slightly lower in 2006-2010 than they were in the 2005-2009 period, possibly suggesting the impact of the recession of the late 2000s, which led to lower mobility rates nationwide.

**Figure 8.3: Percent of Persons Ages 1 and Over in the Appalachian Region Who Had Migrated From Outside Their State of Residence in the Past Year, 2006-2010**

Map Title: Percent of Persons Ages 1 and Over in the Appalachian Region Who Had Migrated From Outside Their State of Residence in the Past Year, 2006-2010

Data Source: U.S. Census Bureau, 2006-2010 American Community Survey.

The share of Americans migrating from outside their state of residence was 3 percent in the 2006-2010 period, down slightly from 3.2 percent in 2005-2009. This suggests a possible impact of the economic downturn of the late 2000s, which lowered migration rates overall. Yet in 91 of Appalachia's 420 counties, out-of-state migration levels were greater than the U.S. average. Most of these counties were in southern and south central Appalachia, and about half were in metropolitan areas. In 203 counties, on the other hand, less than 2 percent of residents had come from out of state, and three-fourths of these counties were outside metropolitan areas.
