

Integrated
Development
for East Africa

Program Information

November 14-16, 2007

United Nations Conference Centre Addis Ababa, Ethiopia

The Population, Health, and Environment Approach to Development

The number of people, where they live, and how they live, all affect the condition of the environment. People alter the environment by clearing land for development, using natural resources, and producing wastes. Changes in environmental conditions, in turn, affect human health and well-being. Rural poverty, high population growth, deforestation, and freshwater scarcity, for example, are all at the P-H-E nexus.

The population-health-environment (PHE) approach to development recognizes the interconnectedness between people and their environment and supports cross-sectoral collaboration and coordination. The approach places particular emphasis on the population, health, and environment sectors; however, the underlying philosophy is one of integration. It can accommodate other sectors, such as agriculture and education, and can be successfully applied to achieve a range of development goals, from poverty reduction to food security to gender equity.

Population, Health, and Environment: Integrated Development for East Africa

Conference Convenors

Population Reference Bureau

Lem Ethiopia/Environment and Development Society of Ethiopia

Organizing Committee

Melissa Thaxton, Policy Analyst, PHE Program, Population Reference Bureau

Lynne Gaffikin, President, Evaluation and Research Technologies for Health (EARTH), Inc.

Mogues Worku, Executive Director, Lem Ethiopia

Judy Oglethorpe, Director, Community Conservation, World Wildlife Fund

Geoffrey Dabelko, Director, Environmental Change and Security Program, Woodrow Wilson International Center for Scholars

Heather D'Agnes, Technical Advisor—PHE, U.S. Agency for International Development

Sahlu Haile, Program Officer, David and Lucile Packard Foundation, Ethiopia

Gilbert Clarke, Program Associate, Environmental Change and Security Program, Woodrow Wilson International Center for Scholars

Robin Marsh, Director, Center for Sustainable Resource Management, University of California at Berkeley

Sponsor and Supporters

U.S. Agency for International Development, Sponsor

The David and Lucile Packard Foundation

Wallace Global Fund

Coastal Resources Center/University of Rhode Island

John Snow, Inc.

Acknowledgements

PRB and Lem Ethiopia recognize the valuable contributions of Michela Marazzani and of Yohannes Kifle and Berhane Abera from Shebelle Conference Services to the organization and management of this conference.

Caucus Room 11

Ato Mogues Worku, Executive Director, Lem Ethiopia

19:00 – 19:30 Village Visit 19:30 – 20:00 Rift Valley Lakes

CONCURRENT SESSION DESCRIPTIONS AND OBJECTIVES

Concurrent Sessions A

November 14, Wednesday | 14:00 - 16:00

A1 Integrated Approaches to Biodiversity Conservation

This session will explore ways in which biodiversity conservation can be enhanced by using cross-sectoral or multisectoral approaches that address the needs of local communities. Such approaches complement more traditional conservation interventions and provide opportunities to engage community members in finding solutions to development needs and environmental problems. Creative approaches that have been tested and adapted in several countries in sub-Saharan Africa will be described along with a discussion of lessons learned in PHE integration for application in other countries.

The session objective is to increase understanding of:

- How to identify communities or areas where integrated approaches are appropriate.
- How to determine which interventions should or can be implemented.
- What factors influence how the approach to integration is developed.
- Challenges to implementing integrated projects on the ground.

A2 PHE Dimensions of Conflict and Security

How are the population, health, and environment sectors related to conflict and security? This session will explore the relationships between these variables, discuss recent research, and examine ways that programs can address population, health, and environment issues in insecure settings. Case studies will be presented from the Mara River Basin in Tanzania and the Laikipia and Samburu districts of Kenya.

After this session, participants will have a better understanding of:

- How population, health, and environment variables can be related to conflict and security.
- How regional, national, and local initiatives in population, health, and/or environment sectors can be structured to have positive impacts on security.

A3 HIV/AIDS and Environment: What Are the Linkages and What Can We Do to Reduce Impacts?

AIDS-affected households in rural areas often consume more natural resources when they lose their main breadwinners and agricultural labor. Certain forms of resource extraction can also contribute to the spread of HIV. At the same time, capacity for environmental management is being lost because of AIDS. This session will explore the linkages between HIV/AIDS, poor living conditions, gender, poverty, and environment, and discuss actions to reduce the resulting impacts on people and environment.

The objectives of this session are to:

- Explore the linkages between HIV/AIDS and the environment.
- · Review responses that have been developed to reduce the serious impacts that are occurring as a result of these linkages.
- Discuss priorities for future action.

A4 Issues in Sustainability: Program and Policy Levels

This session will examine the factors that help create an enabling environment for PHE efforts to be initiated and sustained over time. Such factors include national and local development policies and strategies; financial mechanisms; and the coordination, funding, and dissemination of interdisciplinary research. How, and under what conditions can PHE interventions be "scaled up" will also be discussed.

The session objective is an increased understanding of:

- How PHE initiatives can/should fit into overall development programming.
- The importance of identifying common or intersecting goals across sectors.
- Challenges to coordinating financial support to integrated efforts over time and across sectors.
- The need for rigorous interdisciplinary research and evidence of the "value added" of integrated approaches to development.

Concurrent Sessions B

November 15, Thursday | 10:30 - 12:30

B1 Population-Environment Interactions

This session will explore the relationship between changes in the population and age composition of East African countries and the environmental processes that are influencing and influenced by those changes. Impacts of population growth due to high fertility and migration on the environment will be discussed. Additionally, how environmental pressures can affect livelihoods and population distribution in the region will be reviewed.

The session objective is an increased understanding of:

- Population dynamics in East Africa.
- Potential environmental consequences of a delayed demographic transition in East Africa.
- Environmental factors determining and affected by migration patterns in select East African countries.
- The interdependent relationship among environmental integrity, human health, and the natural resource use practices of East African populations.

B2 Watersheds, Drinking Water, and Sanitation

Water is at the heart of integrated development. Limitations on the amount or quality of water available will determine the success of interventions in population and health (population growth around water points, diarrheal disease and child survival, guinea worm, and malaria) as well as economic opportunities in agriculture, livestock, and industry. The purpose of this session is to examine how both the quantity of water and the quality of water affect human population and the environment, with care to examine gender-specific impacts. Panelists will provide an overview of different perspectives of water, successful cross-cutting interventions, and challenges to integrate water across population, health, livelihood, and environment sectors.

The objectives of this session are an increased understanding of:

- The complexities of multiple ministries and stakeholders involved in water management.
- How drinking water fits within an integrated water resources management perspective.
- Multiple uses of water and the effect of irrigation on malaria transmission.
- Links between diarrhea and malnutrition, and ways to prevent and treat diarrhea at the household level.
- Activities to increase access to safe drinking water and sanitation in the region, with a focus on Ethiopia, in both urban and rural settings.
- How social marketing can educate and motivate at-risk households to adopt products and behaviors that support integrated development goals.

B3 Human and Ecosystem Health

This session will explore the concept of ecosystems—and how humans, fauna, and flora, and the land, water, and air on which they all depend, are system components. Ecosystems are considered healthy as long as they are sustainable, i.e., remain active; can maintain their organization over time; and can rebound from stress. The first Millenium Ecosystem Assessment product, Ecosystems and Human Well-Being, looks at the health of ecosystems worldwide and how their status affects services humans derive from ecosystems including disease prevention. In this session we look at how human health contributes to and is affected by ecosystem health and how human health can be considered a useful indicator of overall ecosystem health.

Specific session objective is an increased understanding of:

- How ecosystems and their components can be defined.
- The interrelatedness between human, wildlife, and plant health with specific examples from Uganda and Ethiopia.
- How human conditions (e.g., disease status) and behaviors contribute to measures of ecosystem "health."

B4 Issues in Sustainability: Community Level

The purpose of this session is to explore strategies and approaches that can be used to better ensure that project efforts become part of the fabric of a community's development and endure over time.

Specific session objective is an increased understanding of:

- What is meant by "sustainability" at the community level.
- Factors external and internal to projects that should be considered when designing and implementing integrated projects.
- Factors specific/intrinsic to integrated efforts that challenge and facilitate sustainability.
- The critical role of community understanding and involvement at all stages.

KNOWLEDGE- AND SKILLS-BUILDING WORKSHOPS

C1/D1 Population, Health, Environment, and Security—A Simulation Exercise

This session will utilize a role-playing gaming exercise to simulate negotiations around a population, health, environment, and security challenge in a fictitious country. Participants will be divided into four negotiating teams (government, civil society, donors, and the military) with distinct interests, capacities, and biases. Based on a scenario written by the organizers, teams will negotiate with counterparts a response to the long- and short-term challenges. The session will end with an out-of-character discussion of the negotiating strategies pursued by each team and lessons learned for pursuing PHE and security challenges in actual on-the-ground settings.

After this session, participants will have a better understanding of:

- How population, health, and environment variables affect, and are affected by, conflict and security.
- · How various players—government, civil society, donors, and the military—bring their interests, capacities, and biases to address population, health, environment, and security.

Workshop facilitators:

Dr. Geoffrey Dabelko, Environmental Change and Security Program, Woodrow Wilson International Center for Scholars

Mr. Gib Clarke, Woodrow Wilson International Center for Scholars

Ato Shewaye Deribe Woldeyohannes, Wichi Integrated Wetland and Watershed Management Project

C2 Bridging the Research-to-Policy Gap

Population, health, and environment studies, demographic and environmental surveys, project evaluations, and other research findings can play a key role in guiding policy and resource-allocation decisions. Yet every year, millions of dollars are spent to produce research results that fail to reach policymakers and potential donors and, consequently, are not used to shape policies and programs.

This research-to-policy gap can arise for a number of reasons. Sometimes, due to their unfamiliarity with the needs of policymakers and donors, researchers do not ask the right questions. Consequently, their research does not address the most important issues or provide the information that policymakers would find most useful. In other cases, researchers may fail to see the policy or programmatic relevance of their own work. As a result, they do not make the extra effort to communicate their research findings in nontechnical language or to shape messages specifically for policy and donor audiences. Likewise, policymakers may be too busy, uninterested, or not aware of what information exists. Thus, they fail to practice data-based decisionmaking and often reach hasty conclusions.

This workshop will provide an overview of and increase knowledge about the policy process, which will enable participants to increase the use of research results to improve policies and programs. The workshop will help participants understand the importance of communicating research findings to policymakers; understand barriers to the policy process; and identify findings, implications, and recommendations of research studies.

Workshop facilitators:

Ms. Erin Sines, Policy Analyst, International Programs, Population Reference Bureau Ms. Melissa Thaxton, Policy Analyst, PHE Program, Population Reference Bureau

D2 Working With the Media—Getting Your PHE Messages Out!

The news media play an important role in framing issues for public debate and in deciding which issues will be framed for discussion. Journalists serve a key function in establishing policy priorities and in reaching decisionmakers, opinion leaders, and the public.

Join us to learn how to work more effectively with the media to spread your organizations' key messages about population, health, and environment issues. Participants will be introduced to various strategies, including the elements of a media strategy, to engage and collaborate with the media to disseminate key information and messages.

Workshop facilitator:

Ms. Florence Machio, Standard Newspaper, Kenya

C3/D3 Advocacy and Community Mobilization

In this workshop, a cross-continental panel including advocates from Asia, Africa, and North America will share their experiences on how to implement successful advocacy campaigns. In the first half of the workshop, participants will interact with the panelists to learn about the basic elements of successful community mobilization efforts, including setting goals, identifying target audiences, crafting meaningful messages, and developing strategies. In the second half of the workshop, participants will engage in a guided exercise in which they will work in small groups to develop their own advocacy/community mobilization plans.

Workshop facilitators:

Ms. Sarah Fairchild, Director, Global Population and Environment Program, Sierra Club Ms. Kathleen Mogelgaard, Assistant Director of Government Relations, National Audubon Society

C4/D4 Project Design and Evaluation for PHE Integration

This workshop aims to introduce participants to two new PHE manuals. The first—Integrated Population, Health and Environment Projects: A Programming Manual—is designed to guide program designers through the basic steps in designing PHE projects, as well as provide information on resources geared specifically toward PHE projects. The second—A Guide for Monitoring and Evaluating Population-Health-Environment Programs provides a comprehensive listing of the most widely used M&E indicators for population-health-environment programs in developing countries. These two manuals are complementary, and when combined provide a solid base of information for individuals working in the field of PHE. This workshop takes participants through an exercise using these manuals in order to familiarize them with the manuals and demonstrate how they can help project implementers create a common set of overall objectives, quality data collection, and effective M&E to help gain support (financially and politically) to protect and expand PHE programs.

Workshop facilitators:

Ms. Caryl Feldacker, Research Associate, Population-Health-Environment, MEASURE Evaluation Dr. Cheryl Margoluis, Independent Consultant

REGISTERED PARTICIPANTS

Bangladesh

Aminul Alam, Deputy Executive Director, BRAC Imran Matin, Director of Research and Africa Program, BRAC
