Smaller Families, Healthier Families in Dedza District

Family size matters for better access to social services and resources

- Population density in Dedza District has increased by one-half in the last two decades, from 114 to 172 people per km².
- Two out of 3 households have an improved source of drinking water.

Benefits of family planning

- One out of 2 women and 3 out of 4 men are literate.
- Twenty-two out of 100 women and 8 out of 100 men are unemployed.
- Distance to the nearest health facility is a serious problem for 3 out of 5 women who try to get treatment when they are sick.

Smaller family size can help parents invest more in each child’s education and increase future employment opportunities. Slower population growth makes it easier to plan and manage improvements in social services and resources such as access to clean water, health care, and transportation.

Benefits of family planning

- One in 5 women gives birth at home.
- Three out of 7 married women use a method of family planning; 1 out of 3 reports using family planning to limit their births.
- One out of 6 women and 1 out of 5 men believe a husband is justified in hitting or beating his wife under certain circumstances.

One in 6 deaths of women 15 to 49 years old is due to maternal-related complications. Family planning allows young women to delay pregnancies and avoid the health risks associated with early childbearing. A woman’s ability to space and limit births has a direct impact on her health and well-being. Children whose mothers die are less likely to thrive and complete school.

Family size matters to the survival and welfare of children

- One out of 6 children under age 5 is underweight.

Benefits of family planning

Family planning improves child survival by allowing couples to adequately space births and limit pregnancies. Babies who are born three or more years apart are more than twice as likely to survive as babies who are born less than two years apart. With smaller family sizes, parents are better able to provide adequate care and nutrition for their children.

In Malawi, 1 woman dies every 2 hours from maternal-related causes.

1 infant less than 12 months old dies every 5 hours.

Among children under 5 years of age, there is 1 death every 2 hours.
