Slide 1: OPENING SLIDE
In the past few decades, Ghana has made some remarkable achievements...

CLICK: Slide 2
Our economy is growing.
We are better educated.
We are healthier than ever before...and we are living longer.
We are... a nation on the rise!

CLICK: Slide 3
But these gains are fragile, and not everyone is benefitting yet.
One in three Ghanaians lives below $1.25 a day.¹ Why is there widespread poverty if our economy is growing?

CLICK: Slide 4
...Because our population is growing faster than our economy.
Today, we have 27 million people.²
And every year...

CLICK: Slide 5
...Ghana adds almost 700,000 more, making it one of the fastest growing countries in the world!³

³ PRB calculations based on UN, World Population Prospects.
What would this mean for our future?

Let’s explore two scenarios:

If we continue to have families with an average of 4 children, our country will grow to 60 million by 2050!^4

But if we start having smaller families and our population grows at a slower rate, we will reach a more manageable 40 million by 2050.^5

That’s a difference of 20 million people – which is most of our population today!^6

The effects of a growing population have brought about significant changes, especially to our cities. Here’s a photo taken in 1960 in Accra, when the city’s population was only half a million and traffic was uncongested.^7

---

► CLICK: Slide 11

... And here are our roads today ---a typical daily commute in Accra that now has a population eight times what it was in 1960!\(^8\)

This is one of the challenges that we face as we struggle to improve our infrastructure to keep pace with the needs of our rapidly growing cities.

► CLICK: Slide 12

Another example of the stress that population growth has on Ghana’s resources and infrastructure is in the provision of energy.

► CLICK: Slide 13

Over the last decade, as Ghana rapidly urbanized and more and more households connected to the power grid, demand for electricity went up by about six percent each year.\(^9\)

► CLICK: Slide 14

Our infrastructure, however, has had a hard time keeping up, and the supply of electricity grew by only three percent per year during the same time period.\(^10\)

► CLICK: Slide 15

---

Due to this gap between supply and demand, we are currently experiencing frequent blackouts and power outages regularly.

► CLICK: Slide 16
Managing future population growth is one critical step in helping Ghana manage its long-term energy supply challenges.

► CLICK: Slide 17
Growth in both urban and rural areas will increase demand for other social services, such as hospitals and schools.

► CLICK: Slide 18
The government will have to use more resources which will strain the national budget and limit investments in other vital areas. This would slow economic growth with fewer jobs, put more pressure on our natural resources, and lower quality of life.

How will we achieve our national development plan if the population continues to grow so rapidly?

► CLICK: Slide 19
What can we do to ensure families in Ghana have a better future?

► CLICK: Slide 20
One way is by addressing the reproductive health needs of families with a special focus on family planning!
Research shows that voluntary family planning:

- Improves the health of women and children
- Boosts social and economic growth and development
- And helps to reduce poverty

► CLICK: Slide 22

Family size will greatly influence how our population’s age structure will transform in the years ahead.

So why is Ghana’s population growing so rapidly?

Let’s take a closer look at Ghana’s fertility rates in last two decades.

► CLICK: Slide 23

Though the average number of children per woman declined from 6.4 to 4.2 in the last 20 years, the sharpest part of the decline...

► CLICK: Slide 24

...occurred by 1998, more than 15 years ago.\(^{11}\)

► CLICK: Slide 25

Since then, the decline in fertility has stalled and fertility has remained at an average of 4 children per woman.

► CLICK: Slide 26

\(^{11}\) Ghana Statistical Service (GSS), Ghana Health Service (GHS), and ICF Macro, 2008 Ghana Demographic and Health Survey (Accra, Ghana: GSS, GHS, and ICF Macro, 2009); GSS, GHS and ICF Macro, 2014 Ghana Demographic and Health Survey Key Indicators (Accra, Ghana: GSS, GHS, and ICF Macro, 2015).
Our most recent national survey shows that only one in five married women uses modern contraceptive methods.\textsuperscript{12}

► CLICK: Slide 27

Yet, about one in three women in Ghana wants to delay or prevent another pregnancy, but is not using any method of family planning.\textsuperscript{13}

These women have what is called an unmet need for family planning. High rates of unmet need lead to high rates of unplanned pregnancies.

► CLICK: Slide 28

In Ghana, more than one in three pregnancies are unplanned.\textsuperscript{14}

This is a problem because unplanned pregnancies are more likely to result in unsafe abortions and to be high-risk for both the mother and her baby.

► CLICK: Slide 29

In fact, 10 women die every day from causes related to pregnancy or childbirth.\textsuperscript{15}

► CLICK: Slide 30

And babies who are born less than 2 years apart are less likely to survive...

► CLICK: Slide 31

\textsuperscript{12} PRB calculations using 22.2\% mCPR among married women based on GSS, GHS, and ICF Macro, 2014 Ghana Demographic and Health Survey Key Indicators.

\textsuperscript{13} PRB calculations using 29.9\% unmet need for FP based on GSS, GHS, and ICF Macro, 2014 Ghana Demographic and Health Survey Key Indicators.

\textsuperscript{14} PRB calculations using 37\% unplanned pregnancies based on GSS, GHS, and ICF Macro, 2014 Ghana Demographic and Health Survey Key Indicators.

...than babies who are born 2 or more years apart.  

► CLICK: Slide 32

But, if Ghana’s unmet need for family planning was met by 2030, 7,000 maternal deaths would be prevented...  

► CLICK: Slide 33

...and 380,000 children’s deaths would be avoided.  

► CLICK: Slide 34

Family planning saves lives!  

► CLICK: Slide 35

What will it cost to meet Ghana’s unmet need for family planning? It would actually save money overall.  

► CLICK: Slide 36

For the next 15 years, it would cost $154 million dollars to meet our needs in family planning.

This translates into savings because as women are having smaller families, the government doesn’t have to spend as much money to meet the needs of the population and can save money on costs related to...
...education

...malaria

...immunization

...water

...and maternal health.

By saving money in other areas, investing to meet the unmet need for family planning would actually save Ghana $349 million dollars!\textsuperscript{20}

Family planning is a best buy! We would save more than $2 for every dollar spent on family planning.

\textsuperscript{20} Futures Group calculations, May 2015
Family planning is a key strategy for addressing rapid population growth. Combined with investments in health, education, economy and governance, it can reduce poverty and grow the economy, both at the family level and at the national level.

Our national Growth and Development Strategy recognizes that population plays a key role in achieving our developmental goals. The stage is set for us to increase our efforts.

So what can be done now? Leaders and policymakers can join together and take action to …

Ensure that family planning is a key component of all national development strategies.

Include reproductive health and contraceptives in the National Health Insurance Scheme’s benefit package.

Increase access to family planning services at the community level by expanding the CHPS program, and
► CLICK: Slide 50

And expand the group of policymakers and leaders who support family planning and mobilize political and community resources.

► CLICK: Slide 51

The progress Ghana has made so far shows us that we can achieve even more. It is time to step up the pace.

Investing in family planning today is investing in the future of our country and people.

By recognizing the importance of population growth and taking action now, we can keep the nation on the path to becoming a higher-income country.

END
